4.2.16	SmartMix Mode Acquisition Request .....	47
4.2.17	No. of Open Mic Change Request .....	49
4.2.18	No. of Open Mic Acquisition Request.....	50
4.2.19	Preset Call Request.....	52

4.2.20	Preset Save Request.....	53
4.2.21	Partial Preset Call Request .....	54
4.3	Input Command Details .....	55
4.3.1	Input Gain&Level Setting Change Request .....	55
4.3.2	Input Gain&Level Setting Acquisition Request.....	57
4.3.3	Input Channel Setting Change Request.....	60
4.3.4	Input Channel Setting Acquisition Request.....	64
4.3.5	Sub-input Channel Setting Change Request .....	68
4.3.6	Sub-input Channel Setting Acquisition Request .....	70
4.3.7	Input Channel Bus Setting Change Request .....	73
4.3.8	Input Channel Bus Setting Acquisition Request.....	75
4.3.9	Input EQ Setting Change Request.....	77
4.3.10	Input EQ Setting Acquisition Request .....	79
4.3.11	FBS Common Setting Change Request.....	81
4.3.12	FBS Common Setting Acquisition Request.....	82
4.3.13	FBS Setting Change Request .....	84
4.3.14	FBS Setting Acquisition Request .....	86
4.3.15	Input Channel Dynamics Setting Change Request.....	88
4.3.16	Input Channel Dynamics Setting Acquisition Request.....	91
4.3.17	AEC Setting Change Request.....	94
4.3.18	AEC Setting Acquisition Request.....	96
4.3.19	Smart Mix Setting Change Request.....	98
4.3.20	Smart Mix Setting Acquisition Request .....	100
4.3.21	Smart Mix Common Setting Change Request .....	102
4.3.22	Smart Mix Common Setting Acquisition Request .....	104
4.3.23	Ducker Setting Change Request.....	106
4.3.24	Ducker Setting Acquisition Request.....	107
4.3.25	Matrix Bus Common Setting Change Request .....	109
4.3.26	Matrix Bus Common Setting Acquisition Request.....	110
4.3.27	Matrix Bus Name Change Request.....	112
4.3.28	Matrix Bus Name Acquisition Request .....	113
4.4	Output Command Details.....	115
4.4.1	Output Level Setting Change Request.....	115
4.4.2	Output Level Setting Acquisition Request.....	117
4.4.3	Output Channel Mute Setting Change Request.....	119
4.4.4	Output Channel Mute Setting Acquisition Request.....	120
4.4.5	Output Channel Setting Change Request.....	122
4.4.6	Output Channel Setting Acquisition Request .....	124
4.4.7	Output EQ Setting Change Request .....	126
4.4.8	Output EQ Setting Acquisition Request .....	130
4.4.9	12BandEQFunction Request.....	133
4.4.10	FBS Setting Change Request .....	134
4.4.11	FBS Setting Acquisition Request .....	134

4.4.12	Dynamics&Delay Setting Change Request.....	135
4.4.13	Dynamics&Delay Setting Acquisition Request.....	138
4.4.14	USB Out Setting Change Request.....	141
4.4.15	USB Out Setting Acquisition Request .....	142
4.4.16	Oscillator Control Setting Change Request .....	144
4.4.17	Oscillator Control Setting Acquisition Request.....	146
4.5	Operator Page Command Details.....	148
4.5.1	Operator Page Common Setting Change Request.....	148
4.5.2	Operator Page Common Setting Acquisition Request.....	149
4.5.3	Operator Page Setting Change Request .....	151
4.5.4	Operator Page Setting Acquisition Request.....	153
4.5.5	Operator Page Channel Setting Change Request.....	156
4.5.6	Operator Page Channel Setting Acquisition Request.....	158
4.5.7	Operator Page Assign Channel Setting Change Request.....	160
4.5.8	Operator Page Assign Channel Setting Acquisition Request.....	162
4.5.9	Operator Page Channel Mute Request.....	164
4.5.10	Array Mic Mute Control Request .....	165
4.5.11	Array Mic Mute Status Acquisition Request .....	166
4.6	System Command Details .....	168
4.6.1	Factory Default Setting Request .....	168
4.6.2	Permission Setting Change Request .....	170
4.6.3	Permission Setting Acquisition Request.....	172
4.6.4	Network Setting Change Request.....	173
4.6.5	Network Setting Acquisition Request .....	176
4.6.6	Dante Setting Change Request.....	179
4.6.7	Dante Setting Acquisition Request.....	181
4.6.8	Firmware Version Acquisition Request .....	183
4.6.9	Header Color Setting Change Request.....	183
4.6.10	Header Color Setting Acquisition Request.....	185
4.6.11	AT-LINK Mode Setting Change Request .....	187
4.6.12	AT-LINK Mode Setting Acquisition Request .....	188
4.6.13	AT-LINK Status Acquisition Request.....	190
4.6.14	Connected Device Limit Setting Change Request.....	192
4.6.15	Connected Device Limit Setting Acquisition Request .....	193
4.6.16	Connected Device Operator Page Setting Change Request.....	195
4.6.17	Connected Device Operator Page Setting Acquisition Request.....	196
4.6.18	Audio System Setting Change Request.....	198
4.6.19	Audio System Setting Acquisition Request .....	199
4.6.20	Front Panel Setting Change Request.....	201
4.6.21	Front Panel Setting Acquisition Request.....	202
4.6.22	Front Panel Function Setting Change Request.....	204
4.6.23	Front Panel Function Setting Acquisition Request.....	205
4.6.24	Log Setting Change Request .....	207

4.6.25	Log Setting Acquisition Request .....	208
4.6.26	Preset Call Request.....	210
4.6.27	Preset Save Request.....	211
4.6.28	Preset Bank Name Change Request .....	212
4.6.29	Preset Bank Name Acquisition Request .....	213
4.6.30	Boot Up Preset Setting Change Request.....	215
4.6.31	Boot Up Preset Setting Acquisition Request.....	216
4.6.32	Preset Common Setting Change Request .....	218
4.6.33	Preset Common Setting Acquisition Request .....	219
4.6.34	File Transfer Request.....	221
4.6.35	File Transfer Cancel Request.....	223
4.6.36	Export Request.....	224
4.6.37	Import Request .....	226
4.6.38	Level Meter Notification Interval Change Request.....	227
4.6.39	Level Meter Notification Interval Setting Acquisition Request .....	228
4.6.40	Level Meter Acquisition Request.....	230
4.6.41	Identify Request.....	232
4.6.42	Date Setting Request .....	233
4.6.43	Reboot Request.....	234
4.6.44	Device ID Acquisition Request .....	235
4.6.45	Preset Number Acquisition Request .....	235
4.6.46	Partial Preset Call Request .....	237
4.6.47	Partial Preset Number Acquisition Request .....	238
5	UDP Communications .....	239
5.1	Communication Control .....	239
5.1.1	Communication Start .....	239
5.1.2	Control Sequence .....	239
5.1.3	Communication Errors .....	239
5.1.4	Communication End .....	239
5.2	Command Details .....	240
5.2.1	Level Meter Notification .....	240
5.2.2	Input Gain/Level Setting Notification .....	243
5.2.3	Output Level Setting Notification .....	244
5.2.4	Output Channel Mute Setting Notification .....	245
5.2.5	Operator Page Channel Setting Notification .....	246
5.2.6	Array Mic Mute Status Notification .....	247
5.2.7	Recording Status Notification .....	248
5.2.8	Preset Call Notification .....	249
5.2.9	Partial Preset Call Notification .....	250
5.2.10	Open Channel State Notification .....	250
5.2.11	Can Cut Setting Notification .....	251
5.2.12	FBS Notification .....	252
6	Appendix.....	254

6.1	Fader Table.....	254
6.2	Frequency Table .....	255
6.3	Q Value Table .....	256
6.4	EQ Gain Table .....	257
6.5	Input Gain Table .....	258
6.6	Transfer data type.....	259

# 1 Introduction

## 1.1 Purpose of This Document

These specifications are of commands to control ATDM-1012 developed by Audio-Technica Corporation.

## 1.2 Definition of Terms/Regulation of Numerical Value Expression

Terms used in this document are defined.

Term	Meaning
Host	Equipment to issue control commands. Application software and equipment for controlling are referred to.
Device	Equipment to be controlled.
AT device	A product by Audio-Technica is referred to among devices.
Message	A character string transmitted/received with one communication on a data format.
Command	A command sentence to control equipment. Included in a message.
Parameter	Used in the combination with commands. A setting value to specify operations of commands.

The numerical value expression is defined below.

Binary number: "b" is added after a number.

Example: 1010 0110b

Hexadecimal number: "0x" is added before a number.

Example: 0xA6

## 2 Basic Specification

For the IP control function, ATDM-1012 is controlled by TCP or UDP protocols.

### 2.1 Communication Interface

**Table 2-1 Communication Interface**

No	Item	Content	Remarks
1.	Communication system	All duplicated communication	
2.	Communication speed	10Mbps / 100Mbps	
3.	Port number	Described later	
4.	Max. data length <sup>1</sup>	287 bytes (linefeed code included)	Ethernet communication header: 32 bytes, control command: 255 bytes
5.	Compatible connector	Device side: RJ45 connector (10/100 Mbps supported) Cable: CAT5e or higher	

---

<sup>1</sup> File Transfer Request and Export Request are exceptional.

## 2.2 Command Format

Transmitted/received commands are classified as below.

**Table 2-2 Communication Interface**

No	Command	Content	Remarks
1.	Set Command	Operation command	ATDM-1012 setting is changed
2.	Get Command	Operation command	ATDM-1012 setting and state are obtained
3.	ACK	Acknowledgment	Response for Set Command
4.	NAK	Negative acknowledgment	Response for Set Command
5.	Answer	Setting state notification	Return for Get Command
6.	Information	State change notification	ATDM-1012 setting/state change is notified of
7.	Request	Operation request	Operation is requested to the host

### 2.2.1 Common for Commands

- [1] A half-width space ( „: 0x20) is used as a delimiter.
- [2] Basically ASCII codes are used for commands and UTF-8 is used for parameters (Ex.: Naming equipment, etc.) for specific commands.
- [3] CR(0xd) is used for command termination.

Example:

```
s_permission_S_0000_00_NC_ "ATDM-1012",0,,,"  
factory ACK  
factory NAK_01  
g_permission_0000_00_NC_ "ATDM-1012",0,,,"  
MD open_channel_notice_0000_00_NC_0,0,0,0,0,0
```

- „: A space is indicated
- „: CR(0xd) is indicated
- ■: A parameter of a command is indicated

## 2.2.2 Set Command/Get Command

The command format of an operation command is described below.

**Table 2-3 Command Format of Operation Command**

No	Item	Content	size	Remarks
1.	Command	Command character string	5byte	See 3.Command List
2.	Handshake Select	Sequence execution method	1byte	H: Handshake method (unused) O: One way method S: ACK/NAK format
3.	Model ID	Unused	4byte	0000 fixed
4.	Unit No	Device ID	2byte	00 - FF
5.	Continue Select	Message division method	2byte	NC: Without message division CS: Top of a divided message CM: Divided message CE: End of divided message
6.	Parameter	A parameter of a command	0 byte -	See Chapter 4
7.	End Character	Termination character of a message	1byte	CR (0x0D)

### 2.2.2.1 Omitting a parameter

When a command is transmitted from the host, the parameter can be omitted. When data are not specified with a comma (,) separation or space (), the parameter is omitted.

Example: When all parameters are omitted

s\_permission\_S\_0000\_00\_NC\_███████↙

However, depending on commands,

- When all parameter are omitted, an error may occur
- Parameters may not be omitted but be unspecified

The above cases and parameters which cannot be omitted are described in each command of Chapter 4.6 and subsequent chapters.

### 2.2.3ACK

The command format of an acknowledgment is described below.

**Table 2-4 Command Format of Acknowledgment**

No	Item	Content	Size	Remarks
1.	Command	Command character string	5byte	See 3.Command List
2.	ACK	ACK	3byte	ACK fixed
3.	End Character	Termination character of a message	1byte	CR (0x0D)

### 2.2.4NAK

The command format of a negative acknowledgment is described below.

**Table 2-5Command Format of Negative Acknowledgment**

No	Item	Content	Size	Remarks
1.	Command	Command character string	5byte	See 3.Command List
2.	NAK	NAK	3byte	NAK fixed
3.	Error Code	Error code	2byte	See Table 2-6
4.	End Character	Termination character of a message	1byte	CR (0x0D)

#### 2.2.4.1 Error code

Error codes are described below.

**Table 2-6 Error Code**

Error code	Error detail	Remarks
01	Grammatical error	<ul style="list-style-type: none"> <li>Mandatory elements do not exist</li> <li>The character string of a mandatory element has an error</li> <li>The length of a character string of each element is outside of the specified range</li> <li>The length of a message character string including a linefeed code is longer than the maximum value</li> </ul>
02	Invalid command	<ul style="list-style-type: none"> <li>A command cannot be found (A command which does not exist has been specified. A command which cannot be used for the device has been specified.)</li> </ul>
03	Divided transmission error	<ul style="list-style-type: none"> <li>“CM” or “CE” has been specified while “CS” of Continue Select has not been received</li> </ul>
04	Parameter error	<ul style="list-style-type: none"> <li>Invalid CH has been specified</li> <li>The parameter is outside of the specified range</li> <li>A parameter not to be changed is to be changed (Priority change during talking, etc.)</li> </ul>
05	Transmission timeout	Unused
90	Busy	Processing unavailable due to Busy state
92	Busy (evacuation mode)	Processing unavailable due to p-Fail (power cut) occurred
93	Busy(Extension <sup>2</sup> )	Processing unavailable (unused) due to Extension mode (CU link)
99	Other errors	Errors other than above

## 2.2.5 Answer

The command format of a setting state return is described below.

**Table 2-7 Command Format of Setting State Return**

No	Item	Content	size	Remarks
1.	Command	Command character string	5byte	See 3.Command List
2.	Model ID	Unused	4byte	0000 fixed
3.	Unit No	Device ID	2byte	00 - FF
4.	Continue Select	Message division method	2byte	NC: Without message division CS: Top of a divided message CM: Divided message CE: End of divided message
5.	Parameter	A parameter of a command	0 byte -	See Chapter 4 and Chapter 5
6.	End Character	Termination character of a message	1byte	CR (0x0D)

## 2.2.6 Information

The command format of a state change notification is described below.

**Table 2-8 Command Format of State Change Notification**

No	Item	Content	size	Remarks
1.	Modify	MD	2byte	MD fixed
2.	Command	Command character string	5byte	See 3.Command List
3.	Model ID	Unused	4byte	0000 fixed
4.	Unit No	Device ID	2byte	00 - FF
5.	Continue Select	Message division method	2byte	NC: Without message division CS: Top of a divided message CM: Divided message CE: End of divided message
6.	Parameter	A parameter of a command	0 byte -	See Chapter 5
7.	End Character	Termination character of a message	1byte	CR (0x0D)

## 2.2.7 Request

The command format of an operation request is described below.

**Table 2-9 Command Format of Operation Request**

No	Item	Content	size	Remarks
1.	Request	RQ	2byte	RQ fixed
2.	Command	Command character string	5byte	See 3.Command List
3.	Model ID	Unused	4byte	0000 fixed
4.	Unit No	Unused	2byte	00 fixed
5.	Continue Select	Message division method	2byte	NC: Without message division CS: Top of a divided message CM: Divided message CE: End of divided message
6.	Parameter	A parameter of a command	0 byte -	See Chapter 4
7.	End Character	Termination character of a message	1byte	CR (0x0D)

### 3 Command List

Table 3-1 Command List

No	Category	Command	Command Name	Remarks	type			Compatibility with ATDM-0604	Compatibility with CN Version
					set	get	info		
1	Individual command	SICL	Input CH Level Change Request		○			-	
2		GICL	Input CH Level Acquisition Request			○		-	
3		SICM	Input CH Mute State Change Request		○			-	
4		GICM	Input CH Mute State Acquisition Request			○		-	
5		SOCL	Output CH Level Change Request		○			-	
6		GOCL	Output CH Level Acquisition Request			○		-	
7		SOCM	Output CH Mute State Change Request		○			-	
8		GOCM	Output CH Mute State Acquisition Request			○		-	
9		SBUS	Bus Assign Change Request		○			-	
10		GBUS	Bus Assign Acquisition Request			○		-	
11		SOPL	Operator Fader Level Change Request		○			-	
12		GOPL	Operator Fader Level Acquisition Request			○		-	
13		SOPM	Operator Fader Mute State Change Request		○			-	
14		GOPM	Operator Fader Mute State Acquisition Request			○		-	
15		SSMM	SmartMix Mode Change Request		○			-	
16		GSMM	SmartMix Mode Acquisition Request			○		-	
17		NOOM	No. of Open Mic Change Request		○			-	
18		GNOOM	No. of Open Mic Acquisition Request			○		-	
19		CALLP	Preset Call Request		○			-	
20		REGIP	Preset Save Request		○			-	
21		CALLPP	Partial Preset Call Request		○			-	No
22	Input	s_input_gain_level	Input Gain&Level Setting Change Request		○			Yes	
23		g_input_gain_level	Input Gain&Level Setting Acquisition Request			○		Yes	
24		input_gain_level_meter_notice	Input Gain/Level Setting Notification				○	Yes	
25		s_input_channel_settings	Input Channel Setting Change Request		○			Yes	

No	Category	Command	Command Name	Remarks	type			Compatibility with ATDM-0604	Compatibility with CN Version
					set	get	info		
26		g_input_channel_settings	Input Channel Setting Acquisition Request			○		Yes	
27		s_subinput_channel_setting_s	Sub-input Channel Setting Change Request		○			-	
28		g_subinput_channel_setting_s	Sub-input Channel Setting Acquisition Request			○		-	
29		s_input_channel_bus_settings	Input Channel Bus Setting Change Request		○			-	
30		g_input_channel_bus_settings	Input Channel Bus Setting Acquisition Request			○		-	
31		s_input_eq	Input EQ Setting Change Request		○			Yes	
32		g_input_eq	Input EQ Setting Acquisition Request			○		Yes	
33		s_fbs_general	FBS Common Setting Change Request		○			Yes	
34		g_fbs_general	FBS Common Setting Acquisition Request			○		Yes	
35		s_fbs	FBS Setting Change Request		○			Yes	
36		g_fbs	FBS Setting Acquisition Request			○		Yes	
37		s_input_channel_comp_settings	Input Channel Dynamics Setting Change Request		○			-	
38		g_input_channel_comp_settings	Input Channel Dynamics Setting Acquisition Request			○		-	
39		s_aec_general	AEC Setting Change Request		○			Yes	No
40		g_aec_general	AEC Setting Acquisition Request			○		Yes	No
41		s_smart_mix	Smart Mix Setting Change Request		○			No	
42		g_smart_mix	Smart Mix Setting Acquisition Request			○		No	
43		s_smart_mix_general	Smart Mix Common Setting Change Request		○			Yes	
44		g_smart_mix_general	Smart Mix Common Setting Acquisition Request			○		Yes	
45		open_channel_notice	Open Channel State Notification				○	No	No
46		cancut_notice	Can Cut Setting Notification				○	Yes	No
47		s_ducker_general	Ducker Setting Change Request		○			No	
48		g_ducker_general	Ducker Setting Acquisition Request			○		No	
49		s_matrix_general	Matrix Bus Common Setting Change Request		○			-	
50		g_matrix_general	Matrix Bus Common Setting Acquisition Request			○		-	

No	Category	Command	Command Name	Remarks	type			Compatibility with ATDM-0604	Compatibility with CN Version
					set	get	info		
51	アウトプット	s_name_bus	Matrix Bus Name Change Request		○				
52		g_name_bus	Matrix Bus Name Acquisition Request			○			
53		s_output_level	Output Level Setting Change Request		○			Yes	
54		g_output_level	Output Level Setting Acquisition Request			○		Yes	
55		output_level_notice	Output Level Setting Notification				○	Yes	
56		s_output_mute	Output Channel Mute Setting Change Request		○			Yes	
57		g_output_mute	Output Channel Mute Setting Acquisition Request			○		Yes	
58		output_mute_notice	Output Channel Mute Setting Notification				○	Yes	
59		s_output_channel_settings	Output Channel Setting Change Request		○			Yes	
60		g_output_channel_settings	Output Channel Setting Acquisition Request			○		Yes	
61		s_output_eq	Output EQ Setting Change Request		○			Yes	
62		g_output_eq	Output EQ Setting Acquisition Request			○		Yes	
63		s_output_12eq_func	12BandEQFunction Request		○			-	
64		s_fbs	FBS Setting Change Request		○			Yes	
65		g_fbs	FBS Setting Acquisition Request			○		Yes	
66		fbs_notice	FBS Notification				○	No	No
67		s_dynamics_delay	Dynamics&Delay Setting Change Request		○			No	
68		g_dynamics_delay	Dynamics&Delay Setting Acquisition Request			○		No	
69		s_usb_out	USB Out Setting Change Request		○			No	
70	Operator page	g_usb_out	USB Out Setting Acquisition Request			○		No	
71		s_oscillator	Oscillator Control Setting Change Request		○			-	
72		g_oscillator	Oscillator Control Setting Acquisition Request			○		-	
73		s_operator_general	Operator Page Common Setting Change Request		○			No	
74		g_operator_general	Operator Page Common Setting Acquisition Request			○		No	
75		s_operator_pagesettings	Operator Page Setting Change Request		○			-	
76		g_operator_pagesettings	Operator Page Setting Acquisition Request			○		-	

No	Category	Command	Command Name	Remarks	type			Compatibility with ATDM-0604	Compatibility with CN Version
					set	get	info		
77	System setting	s_operator_channel	Operator Page Channel Setting Change Request		○			-	
78		g_operator_channel	Operator Page Channel Setting Acquisition Request			○		-	
79		operator_channel_notice	Operator Page Channel Setting Notification			○		Yes	
80		s_operator_assign	Operator Page Assign Channel Setting Change Request		○			-	
81		g_operator_assign	Operator Page Assign Channel Setting Acquisition Request			○		-	
82		s_operator_mute	Operator Page Channel Mute Request		○			Yes	
83		s_arraymic_mute	Array Mic Mute Control Request		○			Yes	
84		g_arraymic_mute	Array Mic Mute Status Acquisition Request			○		Yes	
85		arraymic_mute_notice	Array Mic Mute Status Notification			○		Yes	
86		rec_status_notice	Recording Status Notification			○		-	
87		factory_settings	Factory Default Setting Request		○			-

## 4 TCP Communications

To control the ATDM-1012 from the host, TCP protocol is used for communications.

### 4.1 Communication Control

The following figure shows the communication control flow of IP control.

**Figure 4-1 Communication Control Flow**

- After the system is booted, the status changes from initializing to connection waiting.
- When the host establishes connection with the system, the status changes from connection waiting to reception waiting.
- Received commands are processed by internal processing tasks, and the results (ACK/NAK) are sent.  
Since commands are asynchronously processed, reception is possible even during processing (The next command can be sent without waiting for ACK/NAK and Answer). However, some commands return NAK (90: BUSY).
- When the system is disconnected from the host, the status changes from reception waiting to connection waiting.

## 4.1.1 Communication Start

The host establishes connections with the ATDM-1012.

Simultaneous connection is limited to 5 devices. If the number exceeds the upper limit, the extra connection fails.

**Table 4-1 Communication Control Parameters**

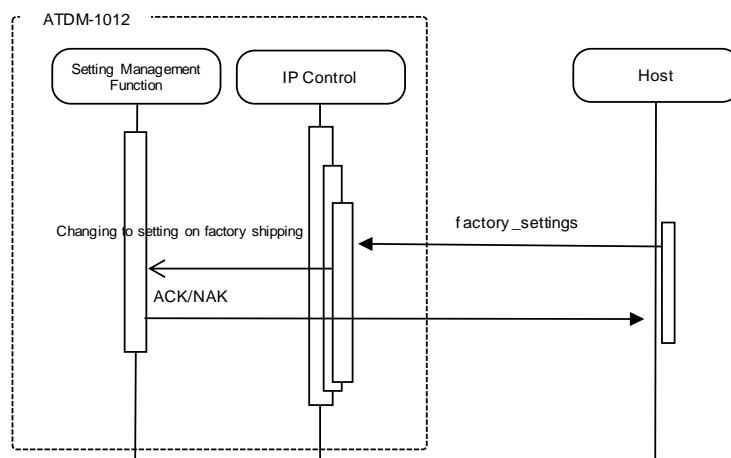

No	Name	Default Setting	Remarks
1.	IPAddress	Auto	
2.	Port No	17300	

## 4.1.2 Control Sequence

### 4.1.2.1 Set Command

Responding to a Set Command, the ATDM-1012 sends ACK/NAK to the sender.

<Example> The sequence of factory default setting is shown below.

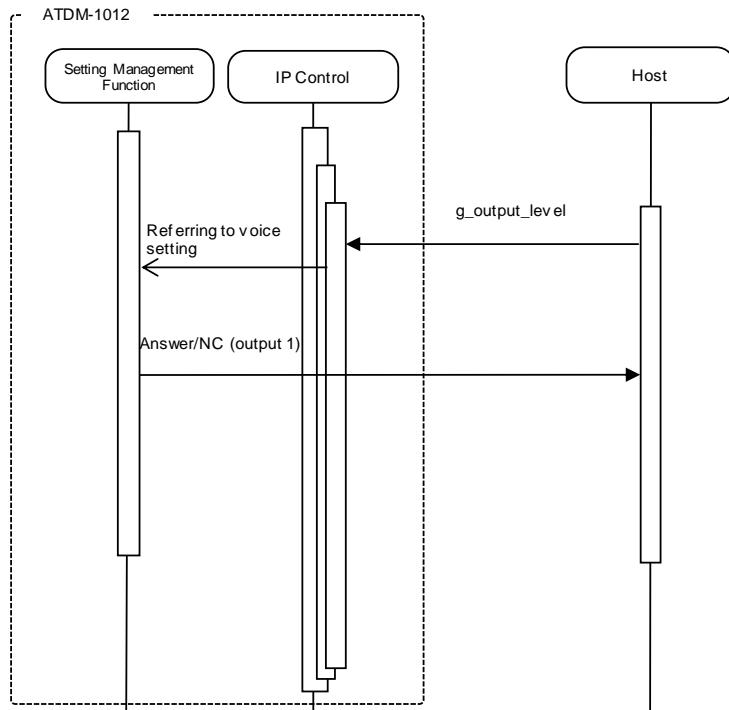

**Figure 4-2 Set Command Processing Sequence**

If an error occurs in a Set Command, such as a syntax error or incorrect parameter, an NAK command is sent to the sender.

#### 4.1.2.2 Get Command

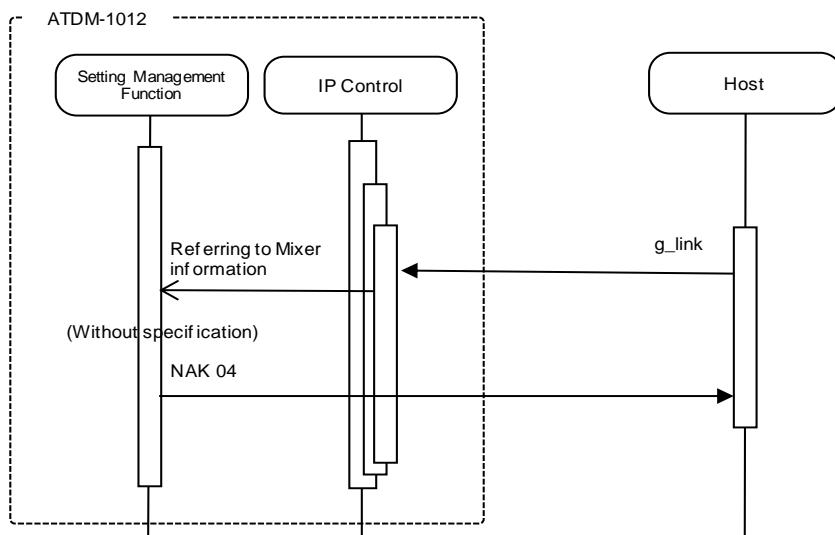

Responding to a Get Command, the ATDM-1012 sends Answer to the sender.

<Example> The sequence of Output Level Setting Acquisition Request is shown below.

**Figure 4-3Get Command Processing Sequence**

If an error occurs in a Get Command, such as a syntax error or incorrect parameter, an NAK command is sent to the sender.

**Figure 4-4 Get Command Processing Sequence (NAK)**

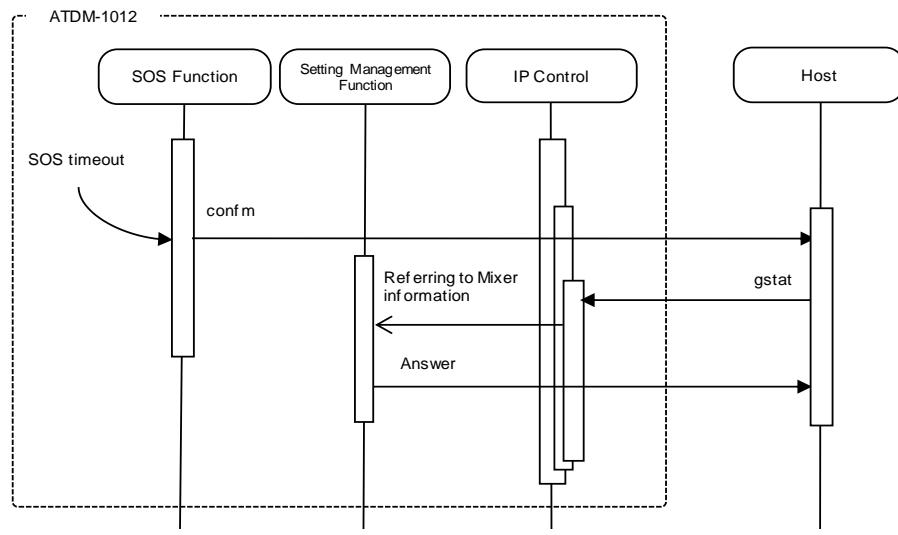

#### 4.1.2.3 Request

The ATDM-1012 sends a Request command at any timing. (Not supported)

<Example> The sequence of status check notification is shown below.

The ATDM-1012 sends the status check notification command to all the connected sockets.

A host receiving the status check notification command needs to send a specific command to the ATDM-1012.

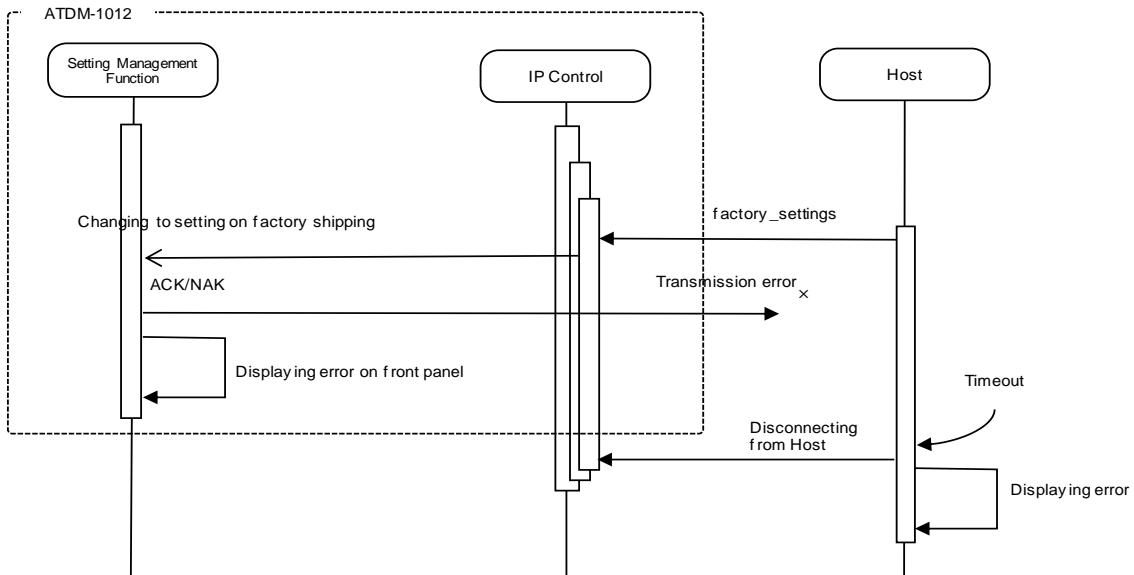

**Figure 4-5 Request Command Processing Sequence**

## 4.1.3 Communication Errors

### 4.1.3.1 Transmission Errors

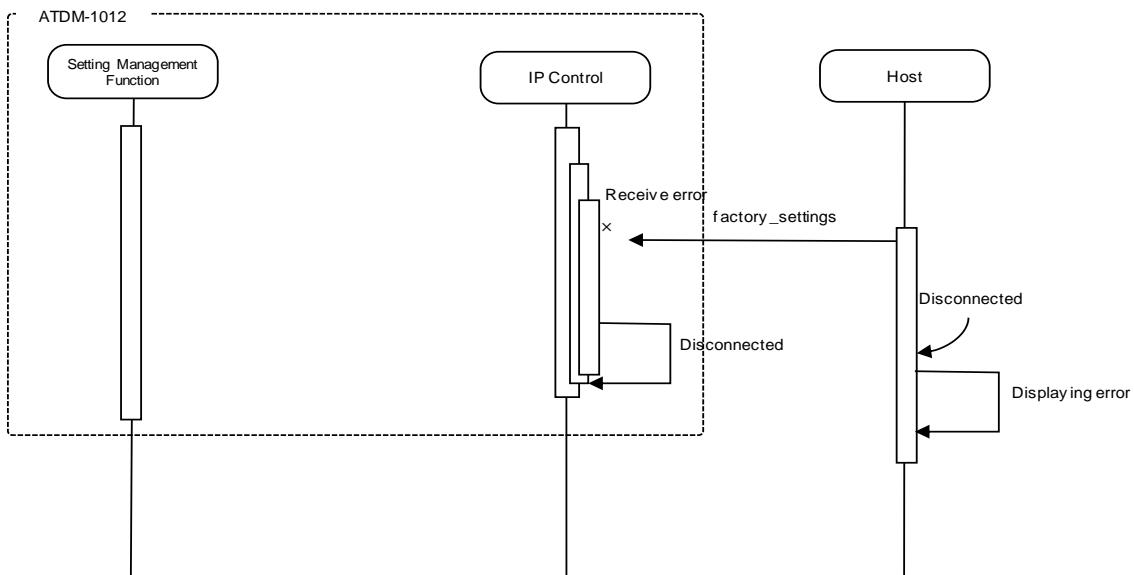

The following figure shows the sequence when an ACK/NAK transmission error occurs.

**Figure 4-6 Sequence for Transmission Errors**

### 4.1.3.2 Receive Errors

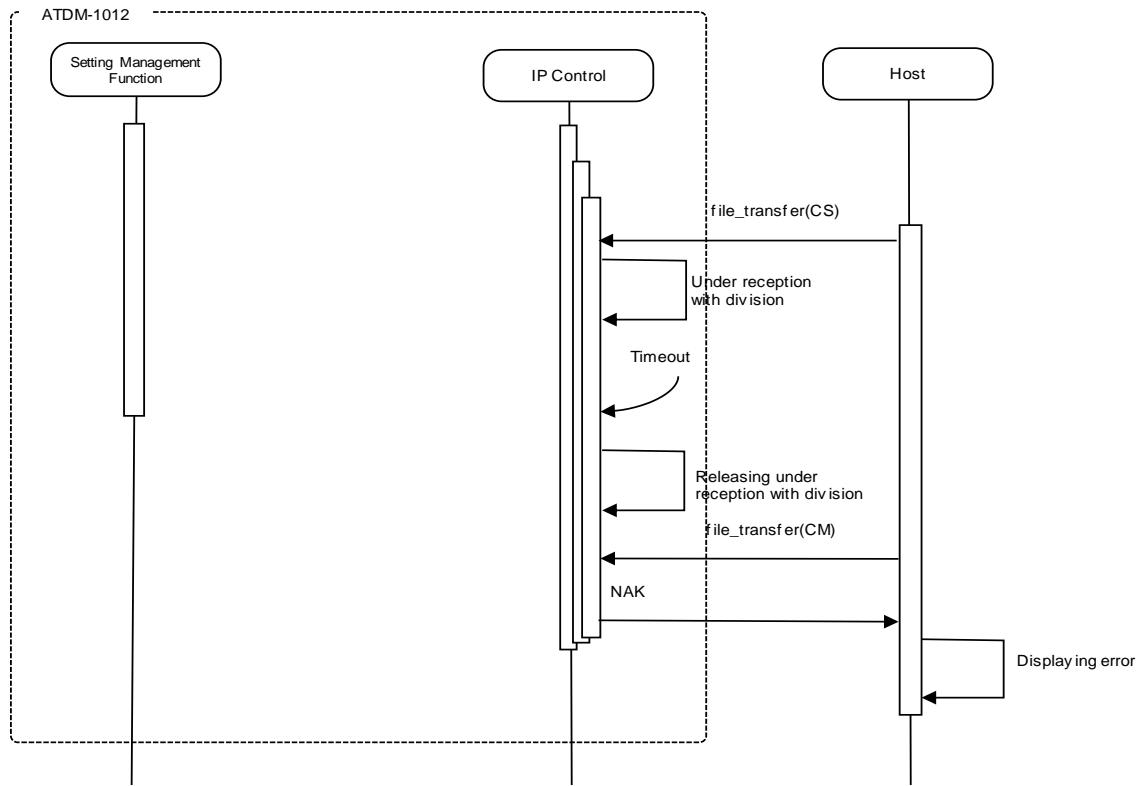

The following figure shows the sequence when a command receive error occurs.

**Figure 4-7 Sequence for Receive Errors**

#### 4.1.3.3 Divided Message Receive Timeouts

The following figure shows the sequence when a divided message receive timeout occurs.

**Figure 4-8 Sequence for Divided Message Receive Timeouts**

#### 4.1.4 Communication End

The host can be disconnected at any timing when communications end.

When it is disconnected, the ATDM-1012 clears the corresponding connection state (Example: File transferring) and enters the connection wait state again. This occurs even if a cable is disconnected. To communicate again, the host needs to establish connection.

## 4.2 Individual Command Details

### 4.2.1 Input CH Level Change Request

After receiving the Input CH Level Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Input CH Level Change Request from the host is shown below.

SICL\_S\_0000\_00\_NC\_1,511\_<

Table 4-2 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	SICL		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9 10 11 12 - 19	Input Channel 1 - 10 Input ST1 Input ST2 Sub Input Channel 1 - 8	
	Level	Level	string	0 - 511	-∞, -120 to +10 dB	See 6.1 Fader Table.
7	End Character	Termination character of a message	binary	0x0d	CR	

#### [2] ACK/NAK

See Factory Default Setting Request[2].

## 4.2.2 Input CH Level Acquisition Request

After receiving the Input CH Level Acquisition Request, the ATDM-1012 sends the input CH level to the host via Answer.

### [1] Get Command

The command format of the Input CH Level Acquisition Request from the host is shown below.

GICL\_O\_0000\_00\_NC\_1\_<

**Table 4-3 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GICL		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Input Channel Select	Parameter Input channel select	string	0 - 9 10 11 12 - 19	Input Channel 1 - 10 Input ST1 Input ST2 Sub Input Channel 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

**GICL\_0000\_00\_NC\_1,511\_↔**

**Table 4-4 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GICL		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter	string

				11	Input ST2	
				12 - 19	Sub Input Channel 1 - 8	
	Level	Level	string	0 - 511	-∞, -120 to +10 dB	See 6.1 Fader Table.
				0x0d	CR	
6	End Character	Termination character of a message	binary			

#### 4.2.3 Input CH Mute State Change Request

After receiving the Input CH Mute State Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Input CH Mute State Change Request from the host is shown below.

SICM\_S\_0000\_00\_NC\_1,1 ↶

**Table 4-5 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	SICM		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10	
				10	Input ST1	
				11	Input ST2	
				12 - 19	Sub Input Channel 1 - 8	
	Mute	Mute	string	0	Disable	
				1	Enable	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.2.4 Input CH Mute State Acquisition Request

After receiving the Input CH Mute State Acquisition Request, the ATDM-1012 sends the input CH Mute state to the host via Answer.

##### [1] Get Command

The command format of the Input CH Mute State Acquisition Request from the host is shown below.

GICM\_O\_0000\_00\_NC\_1\_↓

**Table 4-6 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GICM		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Input Channel Select	Parameter Input channel select	- string	- 0 - 9 10 11 12 - 19	No parameter Input Channel 1 - 10 Input ST1 Input ST2 Sub Input Channel 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

GICM\_0000\_00\_NC\_1,1\_↔

**Table 4-7 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GICM		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter	string			
	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10	
				10	Input ST1	
				11	Input ST2	
				12 - 19	Sub Input Channel 1 - 8	
	Mute	Mute	string	0	Disable	
				1	Enable	
6	End Character	Termination character of a message	binary	0x0d	CR	

## 4.2.5 Output CH Level Change Request

After receiving the Output CH Level Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

### [1] Set Command

The command format of the Output CH Level Change Request from the host is shown below.

SOCL\_S\_0000\_00\_NC\_1,511 ↵

**Table 4-8 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	SOCL		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
6	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
6	Level	Level	string	0 - 511	-∞, -120 to +10 dB	See 6.1 Fader Table.
	End Character	Termination character of a message	binary	0x0d	CR	

### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.2.6 Output CH Level Acquisition Request

After receiving the Output CH Level Acquisition Request, the ATDM-1012 sends the output CH level to the host via Answer.

##### [1] Get Command

The command format of the Output CH Level Acquisition Request from the host is shown below.

GOCL\_O\_0000\_00\_NC\_1↙

**Table 4-9 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GOCL		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
6	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

GOCL\_0000\_00\_NC\_1,511 ↵

**Table 4-10 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GOCL		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter	string			
	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
	Level	Level	string	0 - 511	-∞, -120 to +10 dB	See 6.1 Fader Table.
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.2.7 Output CH Mute State Change Request

After receiving the Output CH Mute State Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Input CH Mute State Change Request from the host is shown below.

SOCM\_S\_0000\_00\_NC\_1,1\_<

**Table 4-11 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	SOCM		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
6	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
6	Mute	Mute	string	0	Disable	
				1	Enable	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.2.8 Output CH Mute State Acquisition Request

After receiving the Output CH Mute State Acquisition Request, the ATDM-1012 sends the output CH Mute state to the host via Answer.

##### [1] Get Command

The command format of the Output CH Mute State Acquisition Request from the host is shown below.

GOCM\_O\_0000\_00\_NC\_1\_<

**Table 4-12 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GOCM		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

GOCM\_0000\_00\_NC\_1,1\_↓

**Table 4-13 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GOCM

	Operator Page No	Operator page number	string	1 - 8	Operator page 1 - 8	
	Operator Fader No	Operator fader number	string	1 - 8	Operator fader 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

GOPM\_0000\_00\_NC\_8,8,1 ↴

**Table 4-22 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GOPM		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter	string			
	Operator Page No	Operator page number	string	1 - 8	Operator page 1 - 8	
	Operator Fader No	Operator fader number	string	1 - 8	Operator fader 1 - 8	
	Mute	Mute	string	0 1	Disable Enable	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.2.15 SmartMix Mode Change Request

After receiving the SmartMix Mode Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the SmartMix Mode Change Request from the host is shown below.

SSMM\_S\_0000\_00\_NC\_4,2\_↓

**Table 4-23 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	SSMM		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
6	Group	Group number	string	1 - 4	Group 1 - 4	
	Mode	SmartMix Mode	string	0	Off	
				1	Gate	
				2	Gain Share	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.2.16 SmartMix Mode Acquisition Request

After receiving the SmartMix Mode Acquisition Request, the ATDM-1012 sends the SmartMix Mode to the host via Answer.

##### [1] Get Command

The command format of the SmartMix Mode Acquisition Request from the host is shown below.

GSMM\_O\_0000\_00\_NC\_4\_<

**Table 4-24 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GSMM		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Group	Group number	string	1 - 4	Group 1 - 4	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

GSMM\_0000\_00\_NC\_4,2\_↵

**Table 4-25 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GSMM		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter	string			
	Group	Group number	string	1 - 4	Group 1 - 4	
	Mode	SmartMix Mode	string	0	Off	
				1	Gate	
				2	Gain Share	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.2.17 No. of Open Mic Change Request

After receiving the No. of Open Mic Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the No. of Open Mic Change Request from the host is shown below.

NOOM\_S\_0000\_00\_NC\_4,10 ↵

**Table 4-26 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	NOOM		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Group	Group number	string	1 - 4	Group 1 - 4	
	NOM	No. of open mic	string	1 - 10	No. of open mic	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.2.18 No. of Open Mic Acquisition Request

After receiving the No. of Open Mic Acquisition Request, the ATDM-1012 sends the input CH Mute state to the host via Answer.

##### [1] Get Command

The command format of the No. of Open Mic Acquisition Request from the host is shown below.

GNOOM\_O\_0000\_00\_NC\_4 ↶

**Table 4-27 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GSMM		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Group	Group number	string	1 - 4	Group 1 - 4	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

GNOOM\_0000\_00\_NC\_4,10\_↵

**Table 4-28 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	GNOOM		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter	string			
	Group	Group number	string	1 - 4	Group 1 - 4	
	NOM	No. of open mic	string	1 - 10	No. of open mic	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.2.19 Preset Call Request

After receiving the Preset Call Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Preset Call Request from the host is shown below.

CALLP\_S\_0000\_00\_NC\_8\_<

**Table 4-29 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	CALLP		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Bank Number	Parameter Bank number	string	1 - 8	Bank 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.2.20 Preset Save Request

After receiving the Preset Save Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Preset Save Request from the host is shown below.

REGIP\_S\_0000\_00\_NC\_8\_<

**Table 4-30 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	REGIP		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Bank Number	Parameter Bank number	string	1 - 8	Bank 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.2.21 Partial Preset Call Request

After receiving the Partial Preset Call Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Partial Preset Call Request from the host is shown below.

CALLPP\_S\_0000\_00\_NC\_40 ↴

**Table 4-31 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	CALLPP		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Partial Preset Number	Parameter Partial preset number	string	1 - 40	Partial preset number	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

## 4.3 Input Command Details

### 4.3.1 Input Gain&Level Setting Change Request

After receiving the Input Gain&Level Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Input Gain&Level Setting Change Request from the host is shown below.

s\_input\_gain\_level\_S\_0000\_00\_NC\_11,40,40,511,1,511,1,40,1,0 ↵

**Table 4-32 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_input_gain_level		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10	
				10	Input ST1	
				11	Input ST2	
				12 - 19	Sub Input Channel 1 - 8	
	gain					
				Sub Input is outside of the target		
	Mic	Mic gain	string	0 - 40	+20db to +60db	See 6.5 Input Gain Table.
	Line	Line gain	string	0 - 40	-20dBu to -60dBu	See 6.5 Input Gain Table.
	Level	Level	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
	Max Volume					
	Enable	On/Off	string	0	Off	
				1	On	
	Value	Volume	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
	Mute	Mute	string	0	Disable	

			1	Enable	
	gain				
	Virtual Mic	Virtual Mic gain	string	0 - 40	-20dBu to -60dBu See 6.5 Input Gain Table.
	Min Volume				
	Enable	On/Off	string	0 1	Off On
	Value	Volume	string	0 - 511	-120 to +10db See 6.1 Fader Table.
7	End Character	Termination character of a message	binary	0x0d	CR

[2] ACK/NAK

See Factory Default Setting Request[2].

### 4.3.2 Input Gain&Level Setting Acquisition Request

After receiving the Input Gain&Level Setting Acquisition Request, the ATDM-1012 sends the input settings to the host via Answer.

#### [1] Get Command

The command format of the Input Gain&Level Setting Acquisition Request from the host is shown below.

g\_input\_gain\_level\_O\_0000\_00\_NC\_11\_↓

Table 4-33 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_input_gain_level		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10	
				10	Input ST1	
				11	Input ST2	
				12 - 19	Sub Input Channel 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

#### [2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_input\_gain\_level\_0000\_00\_NC\_11,40,40,511,1,511,1,40,0,511\_↓

**Table 4-34 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_input_gain_level		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
Input Channel Select	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10	
				10	Input ST1	
				11	Input ST2

				8	Group H		
7	End Character	Termination character of a message	binary	0x0d	CR		

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.3.6 Sub-input Channel Setting Acquisition Request

After receiving the Sub-input Channel Setting Acquisition Request, the ATDM-1012 sends the input settings to the host via Answer.

##### [1] Get Command

The command format of the Input Channel Setting Acquisition Request from the host is shown below.

g\_subinput\_channel\_settings\_O\_0000\_00\_NC\_7 ↴

Table 4-39 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_subinput_channel_settings		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 7	Sub Input Channel 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_subinput\_channel\_settings\_0000\_00\_NC\_7,37,40,1,1,"SUB 8",FFFF00,10\_←

**Table 4-40 Answer Command Format**

No	item	Description	type	value	value description	remarks

### 4.3.7 Input Channel Bus Setting Change Request

After receiving the Input Channel Bus Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Input Channel Bus Setting Change Request from the host is shown below.

```
s_input_channel_bus_settings_S_0000_00_NC_19,2,411,2,411,2,411,2,411,2,411,  
2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,
```

**Table 4-41 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_input_channel_bus_settings		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10

	Bus 10		Same as Bus1
	Bus 11		Same as Bus1
	Bus 12		Same as Bus1
7	End Character	Termination character of a binary message	0x0d CR

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.3.8 Input Channel Bus Setting Acquisition Request

After receiving the Input Channel Bus Setting Acquisition Request, the ATDM-1012 sends the input settings to the host via Answer.

##### [1] Get Command

The command format of the Input Channel Bus Setting Acquisition Request from the host is shown below.

g\_input\_channel\_bus\_settings\_O\_0000\_00\_NC\_19 ↴

Table 4-42 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_input_channel_bus_settings		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9 10 11 12 - 19	Input Channel 1 - 10 Input ST1 Input ST2 Sub Input Channel 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_input\_channel\_bus\_settings\_0000\_00\_NC\_19,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411,2,411 ↴

7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.3.18 AEC Setting Acquisition Request

After receiving the AEC Setting Acquisition Request, the ATDM-1012 sends the AEC settings to the host via Answer.

##### [1] Get Command

The command format of the AEC Setting Acquisition Request from the host is shown below.

g\_aec\_general\_0\_0000\_00\_NC\_←

**Table 4-57 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_aec_general		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_aec\_general\_0000\_00\_NC\_2,22,,1,,12,100,100,1,1,←

**Table 4-58 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_aec_general		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Mode	AEC Mode	string	0	Off	
				1	AEC	
				2	Noise Canceling	
	AEC Reference	AEC Reference	string	5	Input Channel 6	
				9	Input Channel 10	

				10	Input ST1	
				11	Input ST2

	GainShare					
	Weight	Weight of GainShare	string	0 - 60	-15.0,-14.5 - +15.0	
	Gate					
	Priority	Priority	string	0	Off	
	Can Cut			1	On	
7	Off Atenuation of closed mic	Off attenuation of mic	string	0 - 60	-60 dB - 0 dB	
	Threshold	Attenuation	string	0 - 20	-10 - 10 dB	
	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.3.20 Smart Mix Setting Acquisition Request

After receiving the Smart Mix Setting Acquisition Request, the ATDM-1012 sends the input settings to the host via Answer.

##### [1] Get Command

The command format of the Smart Mix Setting Acquisition Request from the host is shown below.

g\_smart\_mix\_O\_0000\_00\_NC\_9\_↓

**Table 4-60 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_smart_mix		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_smart\_mix\_0000\_00\_NC\_9,4,60,1,1,60,20 ↵

**Table 4-61 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_smart_mix		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Input Channel Select	Input channel select	string	0 - 9	Input Channel 1 - 10	
	Smart Mix Group			1 - 4	SmartMix Group 1 - 4	
	GainShare					
	Weight	Weight of GainShare	string	0 - 60	-15.0 - +15.0	0.5 step
	Gate					
	Priority	Priority	string	0	Off	
				1	On

	Smart Mix Group	Smart Mix Group	string	1 - 4	SmartMix Group 1 -	

7	End Character	Termination character of a message	binary	0x0d	4 CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.3.22 Smart Mix Common Setting Acquisition Request

After receiving the Smart Mix Common Setting Acquisition Request, the ATDM-1012 sends the input settings to the host via Answer.

##### [1] Get Command

The command format of the Smart Mix Common Setting Acquisition Request from the host is shown below.

```
g_smart_mix_general_O_0000_00_NC_1_<
```

**Table 4-63 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_smart_mix_general		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Smart Mix Group	Smart Mix Group	string	1 - 4	SmartMix Group 1 - 4	Group1 on omitted
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below.

```
g_smart_mix_general_0000_00_NC_2,1,10000,1,10,1,1,80,4_<
```

**Table 4-64 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_smart_mix_general		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Mode	Smart Mix mode	string	0 1 2	Off Gate Gain Share	
	Last Mic On	Last Mic On	string	0 1	Off On	
	Gate Hold Time	Gate Hold Time	string	100,200,300,400,500,1000,1500,2000,2500,3000,3500,4000,4500,5000,5500,6000,6500,7000,7500,8000,8500,9000,9500,10000		
	NOMA	NOMA	string	0 1	Off On	
	Num Of Open Mic	Num Of Open Mic	string	1 - 10	1 - 10 mic	
	Priority Mode	Priority mode	string	0 1	Mode 1 Mode 2	
	Gate Threshold					
	Enable	Gate Threshold permission	string	0 1	Off On	
	Level	Level	string	0 - 80	-80 dB - 0 dB	
	Smart Mix Group	Smart Mix Group	string	1 - 4	SmartMix Group 1 - 4	
6	End Character	Termination character of a message	binary	0x0d	CR	

### 4.3.23 Ducker Setting Change Request

After receiving the Ducker Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Ducker Setting Change Request from the host is shown below.

s\_ducker\_general\_S\_0000\_00\_NC\_1,4,1,4,1,4,1,4\_<

**Table 4-65 Command Format**

No	item	Description	type	value	value description	remarks			
1	Command	Command character string	string	s_ducker_general					
2	HandShake Select	Sequence execution method	string	S					
3	Model ID	Unused	string	0000	Unused				
4	Unit No	Unused	string	00	Unused				
5	Continue Select	Message division method	string	NC	No divided message				
6	Parameter	Parameter							
ST1									
	Enable	Ducker permission	string	0	Off				
				1	On				
	Trigger		string	1	Bus1				
				2	Bus2				
				3	Bus3				
				4	Bus4				
						Same as ST1			
ST2					Same as ST1				
SUB1/2					Same as ST1				
SUB3/4					Same as ST1				
7	End Character	Termination character of a message	binary	0x0d	CR				

#### [2] ACK/NAK

See Factory Default Setting Request①(ア)[2].

#### 4.3.24 Ducker Setting Acquisition Request

After receiving the Ducker Setting Acquisition Request, the ATDM-1012 sends the log settings to the host via Answer.

##### [1] Get Command

The command format of the Ducker Setting Acquisition Request from the host is shown below.

g\_ducker\_general\_O\_0000\_00\_NC\_↵

**Table 4-66 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_ducker_general		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_ducker\_general\_0000\_00\_NC\_1,4,1,4,1,4,1,4\_↔

**Table 4-67 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_ducker_general		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	ST1					
	Enable	Ducker permission	string	0	Off	
				1	On	
	Trigger		string	1	Bus1	
				2	Bus2	
				3	Bus3	
				4	Bus4

### 4.3.25 Matrix Bus Common Setting Change Request

After receiving the Matrix Bus Common Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Matrix Bus Common Setting Change Request from the host is shown below.

s\_matrix\_general\_S\_0000\_00\_NC\_1,1,1,1\_<

Table 4-68 Command Format

No	item	Description	type	value	value description	remarks		
1	Command	Command character string	string	s_matrix_general				
2	HandShake Select	Sequence execution method	string	S				
3	Model ID	Unused	string	0000	Unused			
4	Unit No	Unused	string	00	Unused			
5	Continue Select	Message division method	string	NC	No divided message			
6	Parameter	Parameter						
Bus 5/6								
Link		Link		string	0	Unlink		
					1	Link		
Bus 7/8								
Bus 9/10								
Bus 11/12								
7	End Character	Termination character of a message	binary	0x0d	CR			

#### [2] ACK/NAK

See Factory Default Setting Request①(ア)[2].

#### 4.3.26 Matrix Bus Common Setting Acquisition Request

After receiving the Matrix Bus Common Setting Acquisition Request, the ATDM-1012 sends the log settings to the host via Answer.

##### [1] Get Command

The command format of the Matrix Bus Common Setting Acquisition Request from the host is shown below.

g\_matrix\_general\_O\_0000\_00\_NC\_↓

**Table 4-69 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_matrix_general		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_matrix\_general\_0000\_00\_NC\_1,1,1,1 ↴

**Table 4-70 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_matrix_general		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Bus 5/6					
	Link	Link	string	0	Unlink	
				1	Link	
	Bus 7/8					Same as Bus 5/6
	Bus 9/10					Same as Bus 5/6
	Bus 11/12					Same as Bus 5/6
6	End Character	Termination character of a message	binary	0x0d	CR	

### 4.3.27 Matrix Bus Name Change Request

After receiving the Matrix Bus Name Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Matrix Bus Name Change Request from the host is shown below.

s\_name\_bus\_S\_0000\_00\_NC\_1,"bus 1"  
  ↖

**Table 4-71 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_name_bus		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Bus Number	Bus number	string	1 - 12	Bus1 - 12	
	Name	Bus name	char	"	Beginning of character string	
			string	ASCII code	Bus name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
7	End Character	Termination character of a message	binary	0x0d	CR	

#### [2] ACK/NAK

See Factory Default Setting Request①(ア)[2].

### 4.3.28 Matrix Bus Name Acquisition Request

After receiving the Matrix Bus Name Acquisition Request, the ATDM-1012 sends the Preset Bank Name Acquisition Request to the host via Answer.

#### [1] Get Command

The command format of the Matrix Bus Name Acquisition Request from the host is shown below.

g\_name\_bus\_O\_0000\_00\_NC\_12\_↓

Table 4-72 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_name_bus		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Bus Number	Parameter Bus number	string	1 - 12	Bus1 - 12	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_name\_bus\_0000\_00\_NC\_12,"bus 12ss"  
↓

**Table 4-73 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_name_bus		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Bus Number	Bus number	string	1 - 12	Bus1 - 12	
	Name	Bus name	char	"	Beginning of character string	
			string	ASCII code	Bus name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
6	End Character	Termination character of a message	binary	0x0d	CR	

## 4.4 Output Command Details

### 4.4.1 Output Level Setting Change Request

After receiving the Output Level Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Output Level Setting Change Request from the host is shown below.

s\_output\_level\_S\_0000\_00\_NC\_9,511,1,511,0,511↙

Table 4-74 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_output_level		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
6	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
6	Level	Level	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
	Max Volume					
	Enable	On/Off	string	0	Off	
				1	On	
6	Value	Volume	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
	Min Volume					
	Enable	On/Off	string	0	Off	
				1	On	
	Value	Volume	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.4.2 Output Level Setting Acquisition Request

After receiving the Output Level Setting Acquisition Request, the ATDM-1012 sends the output settings to the host via Answer.

##### [1] Get Command

The command format of the Output Level Setting Acquisition Request from the host is shown below.

g\_output\_level\_O\_0000\_00\_NC\_9 ↲

Table 4-75 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_output_level		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Output Channel Select	Output channel select	string	0 - 7 8 9	Output Channel 1 - 8 Output ST1 Output ST2	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_output\_level\_0000\_00\_NC\_9,511,1,511,0,511\_↔

**Table 4-76 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_output_level		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
	Level	Level	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
	Max Volume					
	Enable	On/Off	string	0	Off	
				1	On	
	Value	Volume	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
	Min Volume					
	Enable	On/Off	string	0	Off	
				1	On	
	Value	Volume	string	0 - 511	-120 to +10db	See 6.1 Fader Table.
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.4.3 Output Channel Mute Setting Change Request

After receiving the Output Channel Mute Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Output Channel Mute Setting Change Request from the host is shown below.

s\_output\_mute\_S\_0000\_00\_NC\_9,1 ↴

Table 4-77 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_output_mute		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
	Mute	Mute	string	0	Disable	
				1	Enable	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.4.4 Output Channel Mute Setting Acquisition Request

After receiving the Output Channel Mute Setting Acquisition Request, the ATDM-1012 sends the output settings to the host via Answer.

##### [1] Get Command

The command format of the Output Channel Mute Setting Acquisition Request from the host is shown below.

g\_output\_mute\_O\_0000\_00\_NC\_9 ↴

**Table 4-78 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_output_mute		
2	HandShake Select	Sequence execution method	string	O

	Output Channel Select	Output channel select	string	0 - 7 8 9	Output Channel 1 - 8 Output ST1 Output ST2	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_output\_mute\_0000\_00\_NC\_9,1 ↵

**Table 4-79 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_output_mute		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
	Mute	Mute	string	0	Disable	
				1	Enable	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.4.5 Output Channel Setting Change Request

After receiving the Output Channel Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Output Channel Setting Change Request from the host is shown below.

s\_output\_channel\_settings S 0000 00 NC 9,3,"OUT ST2",FFFF,1,13 ↵

**Table 4-80 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_output_channel_settings		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1

				8	Group H	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.4.6 Output Channel Setting Acquisition Request

After receiving the Output Channel Setting Acquisition Request, the ATDM-1012 sends the output settings to the host via Answer.

##### [1] Get Command

The command format of the Output Channel Setting Acquisition Request from the host is shown below.

g\_output\_channel\_settings\_O\_0000\_00\_NC\_9 ↴

**Table 4-81 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_output_channel_settings		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Output Channel Select	Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_output\_channel\_settings\_0000\_00\_NC\_9,3,"OUT ST2",FFFF,1,13\_<

**Table 4-82 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_output_channel_settings		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.4.8 Output EQ Setting Acquisition Request

After receiving the Output EQ Setting Acquisition Request, the ATDM-1012 sends the output settings to the host via Answer.

##### [1] Get Command

The command format of the Output EQ Setting Acquisition Request from the host is shown below.

**g\_output\_eq\_O\_0000\_00\_NC\_9\_<**

**Table 4-84 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_output_eq		
2	HandShake Select	Sequence execution method	string	O

#### 4.4.912BandEQFunction Request

After receiving the 12BandEQFunction Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the 12BandEQFunction Request from the host is shown below.

s\_output\_12eq\_func\_S\_0000\_00\_NC\_9,3,0 ↵

Table 4-86 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_output_12eq_func		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
Output Channel Select		Output channel select	string	0 - 7	Output Channel 1 - 8	
				8	Output ST1	
				9	Output ST2

	Delay Time	Delay time	string	0 - 1000	0 - 1000 msec	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.4.14 USB Out Setting Change Request

After receiving the USB Out Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the USB Out Setting Change Request from the host is shown below.

s\_usb\_out S 0000 00 NC 12,12,411 ↲

Table 4-90 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_usb_out		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	USB1 Bus Select	USB1 bus	string	0	Off	
				1 - 12	Bus 1 - 12	
	USB2 Bus Select	USB2 bus	string	0	Off	
				1 - 12	Bus 1 - 12	
	Send Level	Output level	string	0 - 411	-120 to 0db	See 6.1 Fader Table.
				0x0d	CR	
7	End Character	Termination character of a message	binary			

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.4.15 USB Out Setting Acquisition Request

After receiving the USB Out Setting Acquisition Request, the ATDM-1012 sends the USB output settings to the host via Answer.

##### [1] Get Command

The command format of the USB Out Setting Acquisition Request from the host is shown below.

g\_usb\_out\_O\_0000\_00\_NC\_↵

**Table 4-91 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_usb_out		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_usb\_out\_0000\_00\_NC\_12,12,411\_↵

**Table 4-92 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_usb_out		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	USB1 Bus Select	USB1 bus	string	0	Off	
				1 - 12	Bus 1 - 12	
	USB2 Bus Select	USB2 bus	string	0	Off	
				1 - 12	Bus 1 - 12	
	Send Level	Output level	string	0 - 411	-120 to 0db	See 6.1 Fader Table.
	End Character	Termination character of a message	binary	0x0d	CR	

#### **4.4.16 Oscillator Control Setting Change Request**

After receiving the Oscillator Control Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

## [1] Set Command

The command format of the Oscillator Control Setting Change Request from the host is shown below.

**Table 4-93 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_oscillator		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message

7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### **4.4.17      Oscillator Control Setting Acquisition Request**

After receiving the Oscillator Control Setting Acquisition Request, the ATDM-1012 sends the USB output settings to the host via Answer.

## [1] Get Command

The command format of the Oscillator Control Setting Acquisition Request from the host is shown below.

g\_oscillator\_O\_0000\_00\_NC\_

**Table 4-94 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_oscillator		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

## [2] Answer

The Answer command format from the ATDM-1012 is shown below.

**Table 4-95 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_oscillator		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Enalbe	Oscillator permission	string	0	Off	
				1	On	
	Source	Source	string	0	Sine Wave	
				1	Pink Noise	
	Frequency	Frequency	string	0	100Hz	

No	item	Description	type	value	value description	remarks
				1	1kHz	
				2	10kHz	
	Level	Level	string	0 - 121	-∞, -120 to +10db	See 6.1 Fader Table.
	CH1					
	Assign	CH assign	string	0	Off	
				1	On	
	CH2					Same as CH1
	CH3					Same as CH1
	CH4					Same as CH1
	CH5					Same as CH1
	CH6					Same as CH1
	CH7					Same as CH1
	CH8					Same as CH1
	ST1					Same as CH1
	ST2					Same as CH1
6	End Character	Termination character of a message	binary	0x0d	CR	

## 4.5 Operator Page Command Details

### 4.5.1 Operator Page Common Setting Change Request

After receiving the Operator Page Common Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Operator Page Common Setting Change Request from the host is shown below.

s\_operator\_general\_S\_0000\_00\_NC\_1,1\_↵

Table 4-96 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_operator_general		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	MultiOperatorPage	Multi page use permission	string	0	Disable	
				1	Enable	
	Array Mic Button Link	Array Mic button operation interlock existence	string	0	Off	
				1	On	
7	End Character	Termination character of a message	binary	0x0d	CR	

#### [2] ACK/NAK

See Factory Default Setting Request①(ア)[2].

#### 4.5.2 Operator Page Common Setting Acquisition Request

After receiving the Operator Page Common Setting Acquisition Request, the ATDM-1012 sends the Webremote Operator common settings to the host via Answer.

##### [1] Get Command

The command format of the Operator Page Common Setting Acquisition Request from the host is shown below.

g\_operator\_general\_O\_0000\_00\_NC\_↵

**Table 4-97 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_operator_general		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_operator\_general\_0000\_00\_NC\_1,1 ↵

**Table 4-98 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_operator_general		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	MultiOperatorPage	Multi page use permission	string	0	Disable	
				1	Enable	
	Array Mic Button Link	Array Mic button operation interlock existence	string	0	Off	
				1	On	
6	End Character	Termination character of a message	binary	0x0d	CR	

### 4.5.3 Operator Page Setting Change Request

After receiving the Operator Page Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Operator Page Setting Change Request from the host is shown below.

s\_operator\_pagesettings\_S\_0000\_00\_NC\_8,"page1",1,1,8,1,1,1,1,1 ↵

**Table 4-99 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	String	s_operator_pagesettings		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Page	Page number	string	1 - 8	Page 1 - 8	
	Name	Page name	char	"	Beginning of character string	
			string	ASCII code	Page name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
	Hide from List	Use existence on multi page permitted	string	0	Off	
				1	On	
	Recall Preset	Preset call permission	string	0	Off	
				1	On	
	Num of Preset	Preset number	string	1 - 8	Preset 1 - 8	
	Fader Position Resume	Fader value save	string	0	Off	
				1	On	
	Logout Button	Logout button existence	string	0	Off	
				1	On	
	Array Mic Button	Array Mic button existence	string	0	Off	
				1	On	
	(Reserve)	(Reserve)	string	0	(Reserve)	
	Tascam Button	Tascam button	string	0	Off	

No	item	Description	type	value	value description	remarks
	Tascam Button Layout	Tascam button layout	string	1	On	
				0	Layout1	
				1	Layout2	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request①(ア)[2].

#### 4.5.4 Operator Page Setting Acquisition Request

After receiving the Operator Page Setting Acquisition Request, the ATDM-1012 sends the Webremote Operator Page settings to the host via Answer.

##### [1] Get Command

The command format of the Operator Page Setting Acquisition Request from the host is shown below.

**g\_operator\_pagesettings\_O\_0000\_00\_NC\_8\_<**

**Table 4-100 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_operator_pagesettings		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Device ID	string	00 – FF	Device ID	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Page	Page number	string	1 - 8	Page 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_operator\_pagesettings\_0000\_00\_NC\_8,"page1",1,1,8,1,1,1,1,1\_↓

**Table 4-101 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_operator_pagesettings		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Unused	string	00	Unused	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Page	Page number	string	1 - 8	Page 1 - 8	
	Name	Page name	char	"	Beginning of character string	
			string	ASCII code	Page name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
	Hide from List	Use existence on multi page permitted	string	0 1	Off On	
	Recall Preset	Preset call permission	string	0 1	Off On	
	Num of Preset	Preset number	string	1 - 8	Preset 1 - 8	
	Fader Position Resume	Fader value save	string	0 1	Off On	
	Logout Button	Logout button existence	string	0 1	Off On	
	Array Mic Button	Array Mic button existence	string	0 1	Off On	
	(Reserve)	(Reserve)	string	0	(Reserve)	
	Tascam Button	Tascam button	string	0 1	Off On	
	Tascam Button Layout	Tascam button layout	string	0 1	Layout1 Layout2	

No	item	Description	type	value	value description	remarks
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.5.5 Operator Page Channel Setting Change Request

After receiving the Operator Page Channel Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Operator Page Channel Setting Change Request from the host is shown below.

s\_operator\_channel\_S\_0000\_00\_NC\_8,8,1,"fader8-8",5,100,1,100,1,100 ↵

**Table 4-102 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_operator_channel		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Page	Page number	string	1 - 8	Page 1 - 8	
	Fader Channel	Fader channel number	string	1 - 8	Fader 1 - 8	
	Name	Fader name	char	"	Beginning of character string	
			string	ASCII code	Fader name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
	Icon	Fader icon	string	0	Mic	
				1	Aux	
				2	PC	
				3	Chat	
				4	Spk	
				5	Rec	
	Level	Level	string	0 - 100	0 to 100	1.0step
	Max Volume					
	Enable	On/Off	string	0	Off	
				1	On	
	Value	Volume	string	0 - 100	0 to 100	

No	item	Description	type	value	value description	remarks
	Min Volume	Enable	string	0 1	Off On	
		Value	string	0 - 100	0 to 100	
		End Character	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request①(ア)[2].

#### 4.5.6 Operator Page Channel Setting Acquisition Request

After receiving the Operator Page Channel Setting Acquisition Request, the ATDM-1012 sends the Webremote Operator Page Channel settings to the host via Answer.

##### [1] Get Command

The command format of the Operator Page Channel Setting Acquisition Request from the host is shown below.

g\_operator\_channel\_O\_0000\_00\_NC\_8,8↙

Table 4-103 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_operator_channel		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Page	Page number	string	1 - 8	Page 1 - 8	
	Fader Channel	Fader channel number	string	1 - 8	Fader 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_operator\_channel\_0000\_00\_NC\_8,8,1,"fader8-8",5,100,1,100,1,100↙

Table 4-104 Answer Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_operator_channel		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Page	Page number	string	1 - 8	Page 1 - 8	
	Fader Channel	Fader channel number	string	1 - 8	Fader 1 - 8	
	Name	Fader name	char	"	Beginning of	

No	item	Description	type	value	value description	remarks

	Ch9	Input 9/Output ST1/-				Same as Ch1
	Ch10	Input 10/Output ST2/-				Same as Ch1
	ST1	Input ST1/-/-				Same as Ch1
	ST2	Input ST2/-/-				Same as Ch1
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.5.9 Operator Page Channel Mute Request

After receiving the Operator Page Channel Mute Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Operator Page Channel Mute Request from the host is shown below.

s\_operator\_mute\_S\_0000\_00\_NC\_8,1,8\_↔

**Table 4-108 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_operator_mute		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Fader Channel	Fader channel number	string	1 - 8	Fader 1 - 8	
	Mute	Mute	string	0	No Mute	
				1	Mute	
	Page	Page number	string	1 - 8	Page 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request①(ア)[2].

#### 4.5.10 Array Mic Mute Control Request

After receiving the Array Mic Mute Control Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Array Mic Mute Control Request from the host is shown below.

s\_arraymic\_mute\_S\_0000\_00\_NC\_1,1↓

**Table 4-109 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_arraymic_mute		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Mute	Mute existence	string	0	No mute	
				1	Mute	
	Virtual Mic	Virtual Mic	string	0	Virtual Mic 1	
				1	Virtual Mic 2	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.5.11 Array Mic Mute Status Acquisition Request

After receiving the Array Mic Mute Status Acquisition Request, the ATDM-1012 sends the Array Mic Mute state to the host via Answer.

##### [1] Get Command

The command format of the Array Mic Mute Status Acquisition Request from the host is shown below

g\_arraymic\_mute\_O\_0000\_00\_NC\_1\_<

**Table 4-110 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_arraymic_mute		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	string	0	Virtual Mic 1	
	Virtual Mic	Virtual Mic		1	Virtual Mic 2	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_arraymic\_mute\_0000\_00\_NC\_1,1\_<

**Table 4-111 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_audio_system		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Mute	Mute existence	string	0	No mute	
				1	Mute	
	Virtual Mic	Virtual Mic	string	0	Virtual Mic 1	
				1	Virtual Mic 2	
6	End Character	Termination character of a message	binary	0x0d	CR	

## 4.6 System Command Details

### 4.6.1 Factory Default Setting Request

After receiving the Factory Default Setting Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

#### [1] Set Command

The command format of the Factory Default Setting Request from the host is shown below.

factory\_settings\_S\_0000\_00\_NC\_0\_↓

Table 4-112 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	factory_settings		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Reset Item	Reset items				
	All Setting to Default.	All settings	string	0	All Reset	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

factory\_settings ACK ↵

Table 4-113 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	factory_settings		Sets the received Set/Get command
2	ACK	ACK	string	ACK		
3	End Character	Termination character of a message	binary	0x0d	CR	

factory\_settings NAK 01 ↵

Table 4-114 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	factory_settings		Sets the received Set/Get command
2	NAK	NAK	string	NAK		
3	Error Code	Error code	string	00 - 99	Error code	See Chapter 2.2.4.
4	End Character	Termination character of a message	binary	0x0d	CR	

## 4.6.2 Permission Setting Change Request

After receiving the Permission Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

### [1] Set Command

The command format of the Permission Setting Change Request from the host is shown below.

s\_permission S 0000 00 NC "ATDM-1012",0, ↲

**Table 4-115 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_permission		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Device Name	Device name	char	"	Beginning of character string	
			string	ASCII code	Device name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
	Administrator	Password require	string	0	Password not required	
				1	Password required	
			string	alphanumeric character		Changed to not specified on omitted.
	(Reserve)	(Reserve)	string	0	(Reserve)	
		(Reserve)	string	0	(Reserve)	
	(Reserve)	(Reserve)	string	0	(Reserve)	
		(Reserve)	string	0	(Reserve)	
		(Reserve)	string	0	(Reserve)	
		(Reserve)	string	0	(Reserve)	
		(Reserve)	string	0	(Reserve)	

No	item	Description	type	value	value description	remarks
		(Reserve)	(Reserve)	string	0	(Reserve)
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.3 Permission Setting Acquisition Request

After receiving the Permission Setting Acquisition Request, the ATDM-1012 sends the permission settings to the host via Answer.

##### [1] Get Command

The command format of the Permission Setting Acquisition Request from the host is shown below.

g\_permission\_O\_0000\_00\_NC\_↵

**Table 4-116 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_permission		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_permission\_0000\_00\_NC\_"ATDM-1012",0,\_↓

**Table 4-117 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_permission		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter	string			
	Device Name	Device name	char	"	Beginning of character string	
			string	ASCII code	Device name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
	Administrator					
	Password require	Password requirement at login	string	0	Password not required	
				1	Password required	
	password	Password	string	alphanumeric character		Changed to not specified on omitted.
	(Reserve)	(Reserve)	string	0	(Reserve)

	(Reserve)	(Reserve)	string	0	(Reserve)	
	(Reserve)	(Reserve)	string	0	(Reserve)	
	(Reserve)	(Reserve)	string	0	(Reserve)	
	(Reserve)	(Reserve)	string	0	(Reserve)	
	(Reserve)	(Reserve)	string	0	(Reserve)	
	(Reserve)	(Reserve)	string	0	(Reserve)	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.4 Network Setting Change Request

After receiving the Network Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

If the network settings are changed, the ATDM-1012 needs to be rebooted.

### [1] Set Command

The command format of the Network Setting Change Request from the host is shown below.

```
s_network_S_0000_00_NC_1,192.168.033.102,255.255.000.000,,1,17300,1,1,225.000.0
00.100,17000,0,,,0,,,←
```

**Table 4-118 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_network		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message

	(Reserve)	(Reserve)	string	0		(Reserve)	
	(Reserve)	(Reserve)	string	0		(Reserve)	
7	End Character	Termination character of a message	binary	0x0d		CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.5 Network Setting Acquisition Request

After receiving the Network Setting Acquisition Request, the ATDM-1012 sends the network settings to the host via Answer.

##### [1] Get Command

The command format of the Network Setting Acquisition Request from the host is shown below.

g\_network\_O\_0000\_00\_NC\_↓

**Table 4-119 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_network		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_network\_0000\_00\_NC\_1,,,0005CDC102FA,1,17300,1,1,225.000.000.100,17000,0,,,0,,

#### 4.6.6Dante Setting Change Request

After receiving the Dante Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

If the Dante settings are changed, the ATDM-1012 needs to be rebooted.

##### [1] Set Command

The command format of the Dante Setting Change Request from the host is shown below.

s\_network\_dante\_S\_0000\_00\_NC\_0,5,1,192.168.033.102,255.255.000.000,,1,192.168.0

33.103,255.255.000.000,,

7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.7Dante Setting Acquisition Request

After receiving the Dante Setting Acquisition Request, the ATDM-1012 sends the network settings to the host via Answer.

##### [1] Get Command

The command format of the Dante Setting Acquisition Request from the host is shown below.

**g\_network\_dante\_O\_0000\_00\_NC\_ ↲**

**Table 4-122 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_network_dante		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below.

**g\_network\_dante\_0000\_00\_NC\_0,5,1,192.168.033.102,255.255.000.000,,,1,192.168.033  
.103,255.255.000.000,, ↲**

#### 4.6.8 Firmware Version Acquisition Request

After receiving the Firmware Version Acquisition Request, the ATDM-1012 sends the device firmware version to the host via Answer.

##### [1] Get Command

The command format of the Firmware Version Acquisition Request from the host is shown below.

**g\_firmware\_version\_O\_0000\_00\_NC\_↓**

**Table 4-124 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_firmware_version		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below.

**g\_firmware\_version\_0000\_00\_NC\_01.00.00\_↓**

**Table 4-125 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_firmware_version		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter version	Parameter Version	string	XX.XX.XX	Version	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.9 Header Color Setting Change Request

After receiving the Header Color Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK/NAK.

Also, if the AT-LINK Mode Setting is changed, the ATDM-1012 must be restarted.

[1] Get Command

The command format of the Header Color Setting Change Request from the host is shown below.

s\_header\_color\_S\_0000\_00\_NC\_FFFFFF\_↓

**Table 4-126 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_header_color		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Header Color	Parameter Header color	string	0 1 2 3 4 5 6	White Green Yellow Orange Purple Blue Cyan	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.10 Header Color Setting Acquisition Request

After receiving the Header Color Setting Acquisition Request, the ATDM-1012 sends the header color settings to the host via Answer.

##### [1] Get Command

The command format of the Header Color Setting Acquisition Request from the host is shown below

**g\_header\_color\_O\_0000\_00\_NC\_ ↲**

**Table 4-127 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_header_color		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below

**g\_header\_color\_0000\_00\_NC\_FFFFFF\_ ↲**

**Table 4-128 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_header_color		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Header Color	Header color	string	0	White	
				1	Green	
				2	Yellow	
				3	Orange	
				4	Purple	

No	item	Description	type	value	value description	remarks
6	End Character	Termination character of a message	binary	5	Blue	
				6	Cyan	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.11 AT-LINK Mode Setting Change Request

After receiving the AT-LINK Mode Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK. Also, if the AT-LINK Mode Setting is changed, the ATDM-1012 must be restarted.

##### [1] Set Command

The command format of the AT-LINK Mode Setting Change Request from the host is shown below.

s\_link\_S\_0000\_00\_NC\_1\_↓

**Table 4-129 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_link		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	AT-Link Mode	Audio Technica link mode	string	0	Extention	
				1	Primary	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.12 AT-LINK Mode Setting Acquisition Request

After receiving the AT-LINK Mode Setting Acquisition Request, the ATDM-1012 sends the AT Link settings to the host via Answer.

##### [1] Get Command

The command format of the AT-LINK Mode Setting Acquisition Request from the host is shown below

g\_link\_O\_0000\_00\_NC\_↵

**Table 4-130 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_link		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_link\_0000\_00\_NC\_1\_↓

**Table 4-131 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_link		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter AT-Link Mode	Parameter Audio Technica link mode	string	0 1	Extention Primary	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.13 AT-LINK Status Acquisition Request

After receiving the AT-LINK **Status Acquisition Request**, the ATDM-1012 sends the Extension information to the host via Answer.

##### [1] Get Command

The command format of the AT-LINK **Status Acquisition Request** from the host is shown below

**g\_link\_extstatus\_O\_0000\_00\_NC\_7\_<**

**Table 4-132 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_link_extstatus		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Extention	Extension number	string	1 - 7	Extension1 - Extension7	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_link\_extstatus\_0000\_00\_NC\_7,"ATDM-1012",00000001,01.00.00 ↴

**Table 4-133 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_link_extstatus		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Extention	Extension number	string	1 - 7	Extension1 - Extension7	
	Device Name	Device name	char	"	Beginning of character string	
			string	ASCII code	Device name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
	Serial	Serial number	string	00000000 - 99999999	Serial number	
	version	Version	string	XX.XX.XX	Version	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.14 Connected Device Limit Setting Change Request

After receiving the Connected Device Limit Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Connected Device Limit Setting Change Request from the host is shown below.

```
s_connected_limit_S_0000_00_NC_0,255.000.000.001,255.000.000.002,255.000.000.00
3,255.000.000.004,255.000.000.005_<
```

**Table 4-134 Command Format**

2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Device Access permission					
	Restrict Access	Access permission	string	0 1	Not permit Permit	
	Permission IP1	IP address 1 permitted	string	000.000.000.000 - 255.255.255.255	IP address 1 permitted	
	Permission IP2	IP address 2 permitted	string			Same as Permission IP1
	Permission IP3	IP address 3 permitted	string			Same as Permission IP1
	Permission IP4	IP address 4 permitted	string			Same as Permission IP1
	Permission IP5	IP address 5 permitted	string			Same as Permission IP1
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.15 Connected Device Limit Setting Acquisition Request

After receiving the Connected Device Limit Setting Acquisition Request, the ATDM-1012 sends the connected device restriction settings to the host via Answer.

##### [1] Get Command

The command format of the Connected Device Limit Setting Acquisition Request from the host is shown below

g\_connected\_limit\_O\_0000\_00\_NC\_↓

**Table 4-135 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_connected_limit		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

```
g_connected_limit_0000_00_NC_0,255.000.000.001,255.000.000.002,255.000.000.003,2
55.000.000.004,255.000.000.005_<
```

Table 4-136 Answer Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_connected_limit		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Device Access permission					
	Restrict Access	Access permission	string	0 1	Not use Use	
	Permission IP1	IP address 1 permitted	string	000.000.000.000 255.255.255.255	- IP address 1 permitted	
	Permission IP2	IP address 2 permitted	string			Same as Permission IP1
	Permission IP3	IP address 3 permitted	string			Same as Permission IP1
	Permission IP4	IP address 4 permitted	string			Same as Permission IP1
	Permission IP5	IP address 5 permitted	string			Same as Permission IP1
6	End Character	Termination character of a message	binary	0x0d	CR	

#### **4.6.16 Connected Device Operator Page Setting Change Request**

After receiving the Connected Device Operator Page Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

## [1] Set Command

The command format of the Connected Device Operator Page Setting Change Request from the host is shown below.

**Table 4-137 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_connected_page		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Permission IP No	Index of IP address permitted	string	1 - 5	Permission IP1 - 5	
	Operator Page					
	Page1	Operator page 1 access permission	string	0	Not permit	
				1	Permit	
	Page2	Operator page 2 access permission				Same as Page1
	Page3	Operator page 3 access permission				Same as Page1
	Page4	Operator page 4 access permission				Same as Page1
	Page5	Operator page 5 access permission				Same as Page1
	Page6	Operator page 6 access permission				Same as Page1
	Page7	Operator page 7 access permission				Same as Page1
	Page8	Operator page 8 access permission				Same as Page1
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.17 Connected Device Operator Page Setting Acquisition Request

After receiving the Connected Device Operator Page Setting Acquisition Request, the ATDM-1012 sends the connected device restriction settings to the host via Answer.

##### [1] Get Command

The command format of the Connected Device Operator Page Setting Acquisition Request from the host is shown below

g\_connected\_page\_O\_0000\_00\_NC\_5\_↓

**Table 4-138 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_connected_page		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Permission IP No	Index of IP address permitted	string	1 - 5	Permission IP1 - 5	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_connected\_page\_0000\_00\_NC\_5,1,1,1,1,1,1,1,1 ↵

Table 4-139 Answer Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_connected_page		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Permission IP No	Index of IP address permitted	string	1 - 5	Permission IP1 - 5	
	Operator Page					
	Page1	Operator page 1 access permission	string	0 1	Not permit Permit	
	Page2	Operator page 2 access permission				Same as Page1
	Page3	Operator page 3 access permission				Same as Page1
	Page4	Operator page 4 access permission				Same as Page1
	Page5	Operator page 5 access permission				Same as Page1
	Page6	Operator page 6 access permission				Same as Page1
	Page7	Operator page 7 access permission				Same as Page1
	Page8	Operator page 8 access permission				Same as Page1
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.18 Audio System Setting Change Request

After receiving the Audio System Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Audio System Setting Change Request from the host is shown below.

s\_audio\_system\_S\_0000\_00\_NC\_1,2,1,3↙

**Table 4-140 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_audio_system		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Gain Unit Type	Gain unit	string	0	dBu/dBV	
				1	dB	
	Delay Unit Type	Delay unit	string	0	ms	
				1	M	
				2	Ft	
	Input EQ/DYN	Input Channel EQ/Dyn display setting	string	0	EQ	
				1	Dyn	
	Virtual Mic Mode	Virtual Mic mode	string	0	Off	
				1	Virtual Mic 1	
				2	Virtual Mic 2	
				3	Virtual Mic 1 & Virtual Mic 2	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.19 Audio System Setting Acquisition Request

After receiving the Audio System Setting Acquisition Request, the ATDM-1012 sends the Audio System settings to the host via Answer.

##### [1] Get Command

The command format of the Audio System Setting Acquisition Request from the host is shown below

g\_audio\_system\_O\_0000\_00\_NC\_↓

Table 4-141 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_audio_system		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_audio\_system\_0000\_00\_NC\_1,2,1,3 ↵

**Table 4-142 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_audio_system		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Gain Unit Type	Gain unit	string	0	dBu/dBV	
				1	dB	
	Delay Unit Type	Delay unit	string	0	ms	
				1	M	
				2	Ft	
	Input EQ/DYN	Input Channel EQ/Dyn display setting	string	0	EQ	
				1	Dyn	
	Virtual Mic Mode	Virtual Mic mode	string	0	Off	
				1	Virtual Mic 1	
				2	Virtual Mic 2	
				3	Virtual Mic 1 & Virtual Mic 2	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.20 Front Panel Setting Change Request

After receiving the Front Panel Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Front Panel Setting Change Request from the host is shown below.

s\_front\_panel\_S\_0000\_00\_NC\_1,1,1\_←

**Table 4-143 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_front_panel		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Recall Preset	Preset call setting	string	0	Disable	
				1	Enable	
	LED Dimmer	LED dimmer setting	string	0	Disable	
				1	Enable	
	Error Notice	Error display setting	string	0	Not display	
				1	Display	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.21 Front Panel Setting Acquisition Request

After receiving the Front Panel Setting Acquisition Request, the ATDM-1012 sends the front panel control settings to the host via Answer.

##### [1] Get Command

The command format of the Front Panel Setting Acquisition Request from the host is shown below

g\_front\_panel\_O\_0000\_00\_NC\_↓

**Table 4-144 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_front_panel		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_front\_panel\_0000\_00\_NC\_1,1,1 ↴

**Table 4-145 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_front_panel		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Recall Preset	Preset call setting	string	0	Disable	
				1	Enable	
	LED Dimmer	LED dimmer setting	string	0	Disable	
				1	Enable	
	Error Notice	Error display setting	string	0	Not display	
				1	Display	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.22 Front Panel Function Setting Change Request

After receiving the Front Panel Function Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Front Panel Function Setting Change Request from the host is shown below.

s\_front\_panel\_limit\_S\_0000\_00\_NC\_1,1,9,1\_<

**Table 4-146 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_front_panel_limit		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Function	Function	string	0	Level	
				1	Mute	
	Target	Target	string	0	Input Channel	
				1	Output Channel	
	Channel Select	Channel select	string	0 - 9	Input Channel 1 - 10	When Target is 0
				10	Input ST1	
				11	Input ST2	
				0 - 7	Output Channel 1 - 8	
				8	Output ST1	When Target is 1
				9	Output ST2	
	Enable	Enable/Disable		0	Disable	
				1	Enable	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.23 Front Panel Function Setting Acquisition Request

After receiving the Front Panel Function Setting Acquisition Request, the ATDM-1012 sends the front panel control settings to the host via Answer.

##### [1] Get Command

The command format of the Front Panel Function Setting Acquisition Request from the host is shown below

**g\_front\_panel\_limit\_O\_0000\_00\_NC\_1,1,9↙**

**Table 4-147 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_front_panel_limit		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
	Function	Function	string	0	Level	
				1	Mute	
	Target	Target	string	0	Input Channel	
				1	Output Channel	
6	Channel Select	Channel select	string	0 - 9	Input Channel 1 - 10	When Target is 0
				10	Input ST1	
				11	Input ST2	
				0 - 7	Output Channel 1 - 8	
				8	Output ST1	When Target is 1
				9	Output ST2	
				CR		
7	End Character	Termination character of a message	binary	0x0d		

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_front\_panel\_limit\_0000\_00\_NC\_1,1,9,1\_↵

**Table 4-148 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_front_panel		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Function	Function	string	0	Level	
				1	Mute	
	Target	Target	string	0	Input Channel	
				1	Output Channel	
	Channel Select	Channel select	string	0 - 9	Input Channel 1 - 10	When Target is 0
				10	Input ST1	
				11	Input ST2	
				0 - 7	Output Channel 1 - 8	When Target is 1
				8	Output ST1	
				9	Output ST2	
	Enable	Enable/Disable	string	0	Disable	
				1	Enable	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.24 Log Setting Change Request

After receiving the Log Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Log Setting Change Request from the host is shown below.

s\_log\_S\_0000\_00\_NC\_1,2\_<

**Table 4-149 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_log		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Enabled	Log output	string	0	Disable	
	Output destination	Output destination		1	Enable	
			string	0	Internal	
				2	Syslog	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.25 Log Setting Acquisition Request

After receiving the Log Setting Acquisition Request, the ATDM-1012 sends the log settings to the host via Answer.

##### [1] Get Command

The command format of the Log Setting Acquisition Request from the host is shown below.

g\_log\_O\_0000\_00\_NC\_↓

**Table 4-150 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_log		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_log\_0000\_00\_NC\_1,2\_↵

**Table 4-151 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_log		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Enabled	Log output	string	0	Disable	
				1	Enable	
	Output destination	Output destination	string	0	Internal	
				2	Syslog	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.26 Preset Call Request

After receiving the Preset Call Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Preset Call Request from the host is shown below.

call\_preset\_S\_0000\_00\_NC\_8\_<

Table 4-152 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	call_preset		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Bank Number	Parameter Bank number	string	1 - 8	Bank 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.27 Preset Save Request

After receiving the Preset Save Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Preset Save Request from the host is shown below.

save\_preset\_S\_0000\_00\_NC\_8\_<

Table 4-153 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	save_preset		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Bank Number	Parameter Bank number	string	1 - 8	Bank 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.28 Preset Bank Name Change Request

After receiving the Preset Bank Name Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Preset Bank Name Change Request from the host is shown below.

s\_name\_bank\_S\_0000\_00\_NC\_1,"preset 1"  
  ↖

Table 4-154 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_name_bank		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Bank Number	Bank number	string	1 - 8	Bank 1 - 8	
	Name	Bank name	char	"	Beginning of character string	
			string	ASCII code	Bank name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.29 Preset Bank Name Acquisition Request

After receiving the Preset Bank Name Acquisition Request, the ATDM-1012 sends the Preset Bank Name Acquisition Request to the host via Answer.

##### [1] Get Command

The command format of the Preset Bank Name Acquisition Request from the host is shown below.

g\_name\_bank\_O\_0000\_00\_NC\_←

Table 4-155 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_name_bank		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_name\_bank\_0000\_00\_CS\_1,"preset 1"  
↓

g\_name\_bank\_0000\_00\_CM\_2,"preset 2"  
↓

•

•

•

g\_name\_bank\_0000\_00\_CM\_7,"preset 7"  
↓

g\_name\_bank\_0000\_00\_CE\_8,"preset 8"  
↓

**Table 4-156 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_name_bank		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	1 - 8	Device ID	
4	Continue Select	Message division method	string	CS/CM/CE	Divided message	
5	Parameter	Parameter				
	Bank Number	Bank number	string	1 - 8	Bank 1 - 8	
	Name	Bank name	char	"	Beginning of character string	
			string	ASCII code	Bank name	To contain double quotation marks ("), specify them in succession like "".
			char	"	End of character string	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.30 Boot Up Preset Setting Change Request

After receiving the Boot Up Preset Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.  
The Boot Up Preset indicates the preset that is recalled at power-on.

##### [1] Set Command

The command format of the Boot Up Preset Setting Change Request from the host is shown below.

s\_bootup\_preset\_S\_0000\_00\_NC\_0\_<

**Table 4-157 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_bootup_preset		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	string	0	Not select	
	Bank Number	Bank number		1 - 8	Bank 1 - 8	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.31 Boot Up Preset Setting Acquisition Request

After receiving the Boot Up Preset Setting Acquisition Request, the ATDM-1012 sends the log settings to the host via Answer.

The Boot Up Preset indicates the preset that is recalled at power-on.

##### [1] Get Command

The command format of the Boot Up Preset Setting Acquisition Request from the host is shown below.

g\_bootup\_preset\_O\_0000\_00\_NC\_↵

**Table 4-158 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_bootup_preset		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_bootup\_preset\_0000\_00\_NC\_0\_↵

**Table 4-159 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_bootup_preset		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	1 - 8	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Bank Number	Bank number	string	0	Not select	
				1 - 8	Bank 1 - 8	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.32 Preset Common Setting Change Request

After receiving the Preset Common Setting Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Preset Common Setting Change Request from the host is shown below.

s\_preset\_general\_S\_0000\_00\_NC\_1,1 ↴

**Table 4-160 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_preset_general		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Preset Recall Link	Preset interlock existence	string	0	Off	
				1	On	
	Tascam Preset Link	Preset interlock existence (Tascam)	string	0	Off	
				1	On	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.33 Preset Common Setting Acquisition Request

After receiving the Preset Common Setting Acquisition Request, the ATDM-1012 sends the log settings to the host via Answer.

##### [1] Get Command

The command format of the Preset Common Setting Acquisition Request from the host is shown below.

g\_preset\_general\_O\_0000\_00\_NC\_↓

**Table 4-161 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_preset_general		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_preset\_general\_0000\_00\_NC\_1,1↙

**Table 4-162 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_bootup_preset		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Preset Recall Link	Preset interlock existence	string	0	Off	
				1	On	
	Tascam Preset Link	Preset interlock existence (Tascam)	string	0	Off	
				1	On	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.34 File Transfer Request

After receiving the File Transfer Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the File Transfer Request from the host is shown below.

```
file_transfer_S_0000_00_CS_p1,00000400,1024,[binary data]_<
```

```
file_transfer_S_0000_00_CM_p1,00000800,1024,[binary data]_<
```

•  
•  
•

```
file_transfer_S_0000_00_CM_p1,00001000,1024,[binary data]_<
```

```
file_transfer_S_0000_00_CE_p1,00001400,256,[binary data]_<
```

**Table 4-163 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	file_transfer		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC/CS/CM/CE	Divided message	
6	Parameter	Parameter				
	Kind	Transfer data type	string	See 6.6 Transfer data type.		
	File Offset	Offset	string	00000000 - FFFFFFFF	Specify the offset in the transfer file with HEX. Do not add "0x." A value obtained with ftell (FILE*)	
	Size	Size	string	0001 - 1024	Specify the number of bytes of transfer data with DEC.	
	Data	Transfer data	binary	-	Specify the transfer data with a binary number.	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.35 File Transfer Cancel Request

After receiving the File Transfer Cancel Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the File Transfer Cancel Request from the host is shown below.

file\_transfer\_cancel\_S\_0000\_00\_NC\_p1↙

**Table 4-164 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	file_transfer_cancel		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC/CS/CM/CE	Divided message	
6	Parameter	Parameter				
	Kind	Transfer data type	string	See 6.6 Transfer data type.		
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.36 Export Request

After receiving the Export **Request**, the ATDM-1012 sends data specified by ACK or NAK to the host.

##### [1] Get Command

The command format of the Export **Request** from the host is shown below.

export\_O\_0000\_00\_NC\_p1\_↓

Table 4-165 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	export		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Kind	Parameter Transfer data type	string	See 6.6 Transfer data type.		
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

export\_0000\_00\_CS\_p1,00000400,1024,[binary data] ↴

export\_0000\_00\_CM\_p1,00000800,1024,[binary data] ↴

.

.

.

export\_0000\_00\_CM\_p1,00001000,1024,[binary data] ↴

export\_0000\_00\_CE\_p1,00001400,256,[binary data] ↴

**Table 4-166 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	export		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	1 - 8	Device ID	
4	Continue Select	Message division method	string	NC/CS/CM/CE	Divided message	
5	Parameter	Parameter				
	Kind	Transfer data type	string	See 6.6 Transfer data type.		
	File Offset	Offset	string	00000000 - FFFFFFFF	Specify the offset in the transfer file with HEX. Do not add "0x." A value obtained with ftell (FILE*)	
	Size	Size	string	0001 - 1024	Specify the number of bytes of transfer data with DEC.	
	Data	Transfer data	binary	-	Specify the transfer data with a binary number.	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.37 Import Request

After receiving the Import **Request**, the ATDM-1012 sends the processing results to the host via ACK or NAK.

After Import **Request**, for the transfer data, the File **Transfer Request** command is used.

##### [1] Set Command

The command format of the Import **Request** from the host is shown below.

import\_S\_0000\_00\_NC\_p1\_<

Table 4-167 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	import		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Kind	Transfer data type	string	See 6.6 Transfer data type.		
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.38 Level Meter Notification Interval Change Request

After receiving the Level Meter Notification Interval Change Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Get Command

The command format of the Level Meter Notification Interval Change Request from the host is shown below.

s\_level\_meter\_interval\_S\_0000\_00\_NC\_100\_↓

**Table 4-168 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_level_meter_interval		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Interval	Notification interval	string	100 -	msec	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.39 Level Meter Notification Interval Setting Acquisition Request

After receiving the Level Meter Notification Interval Setting Acquisition Request, the ATDM-1012 sends the level meter settings to the host via Answer.

##### [1] Get Command

The command format of the Level Meter Notification Interval Setting Acquisition Request from the host is shown below.

g\_level\_meter\_interval\_O\_0000\_00\_NC\_0\_↓

**Table 4-169 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_level_meter_interval		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter		-	-	No
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_level\_meter\_interval\_0000\_00\_NC\_0,10\_↵

**Table 4-170 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_level_meter_interval		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter Interval	Parameter Notification interval	string	100 -	msec	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.40 Level Meter Acquisition Request

After receiving the Level Meter Acquisition Request, the ATDM-1012 sends the level meter settings to the host via Answer.

##### [1] Get Command

The command format of the Level Meter Acquisition Request from the host is shown below.

g\_level\_meter\_O\_0000\_00\_NC\_0\_↓

Table 4-171 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_level_meter		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter Monitor Point	Parameter Monitor point	string	0 - 41	Level 0 - Level 41	See 5.2.1.
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below.

g\_level\_meter\_0000\_00\_NC\_0,10\_↵

**Table 4-172 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_level_meter		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Monitor Point	Monitor point	string	0 - 41	Level 0 - Level 41	See 5.2.1.
	Level	Level	string	0 - 61	Level	The range depends on the monitor point
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.41 Identify Request

After receiving the Identify Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Identify Request from the host is shown below.

identify\_S\_0000\_00\_NC\_↓

Table 4-173 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	identify		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.42 Date Setting Request

After receiving the Date Setting Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Date Setting Request from the host is shown below.

s\_date\_S\_0000\_00\_NC\_20190711145000\_↵

Table 4-174 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	s_date		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Timestamp	Timestamp	string	YYYYMMDDHHMMSS	Timestamp (four-digit year)	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.43 Reboot Request

After receiving Reboot Request, the ATDM-1012 performs self-reboot.

##### [1] Set Command

The command format of the Reboot Request from the host is shown below.

reboot\_S\_0000\_00\_NC\_↓

Table 4-175 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	reboot		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.44 Device ID Acquisition Request

After receiving the Device ID Acquisition Request, the ATDM-1012 sends the header color settings to the host via Answer.

##### [1] Get Command

The command format of the Device ID Acquisition Request from the host is shown below

g\_deviceid\_O\_0000\_00\_NC\_↓

**Table 4-176 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_deviceid		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_deviceid\_0000\_00\_NC\_8\_↓

**Table 4-177 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_deviceid		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Device ID	Device ID	string	00 – FF	Device ID	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.45 Preset Number Acquisition Request

After receiving the Preset Number Acquisition Request, the ATDM-1012 sends the preset bank number to the host via Answer.

[1] Get Command

The command format of the Preset Number Acquisition Request from the host is shown below

g\_preset\_number\_O\_0000\_00\_NC\_↓

**Table 4-178 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_preset_number		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

[2] Answer

The Answer command format from the ATDM-1012 is shown below

g\_preset\_number\_0000\_00\_NC\_8\_↓

**Table 4-179 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_preset_number		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Bank Number	Bank number	string	00 – FF	Bank 1 - 8	
6	End Character	Termination character of a message	binary	0x0d	CR	

#### 4.6.46 Partial Preset Call Request

After receiving the Partial Preset Call Request, the ATDM-1012 sends the processing results to the host via ACK or NAK.

##### [1] Set Command

The command format of the Partial Preset Call Request from the host is shown below.

call\_partial\_preset\_S\_0000\_00\_NC\_8\_↓

Table 4-180 Command Format

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	call_partial_preset		
2	HandShake Select	Sequence execution method	string	S		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter				
	Partial Preset Number	Partial preset number	string	1 - 40	Partial preset number	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] ACK/NAK

See Factory Default Setting Request[2].

#### 4.6.47 Partial Preset Number Acquisition Request

After receiving the Partial Preset Number Acquisition Request, the ATDM-1012 sends the partial preset number to the host via Answer.

##### [1] Get Command

The command format of the Partial Preset Number Acquisition Request from the host is shown below

**g\_partial\_preset\_number\_O\_0000\_00\_NC\_↓**

**Table 4-181 Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_partial_preset_number		
2	HandShake Select	Sequence execution method	string	O		
3	Model ID	Unused	string	0000	Unused	
4	Unit No	Unused	string	00	Unused	
5	Continue Select	Message division method	string	NC	No divided message	
6	Parameter	Parameter	-	-	No parameter	
7	End Character	Termination character of a message	binary	0x0d	CR	

##### [2] Answer

The Answer command format from the ATDM-1012 is shown below

**g\_preset\_number\_0000\_00\_NC\_1\_↓**

**Table 4-182 Answer Command Format**

No	item	Description	type	value	value description	remarks
1	Command	Command character string	string	g_partial_preset_number		
2	Model ID	Unused	string	0000	Unused	
3	Unit No	Device ID	string	00 – FF	Device ID	
4	Continue Select	Message division method	string	NC	No divided message	
5	Parameter	Parameter				
	Partial Preset Number	Partial preset number	string	1 - 40	Partial preset number	
6	End Character	Termination character of a message	binary	0x0d	CR	

## 5 UDP Communications

The information (status change notification) from the ATDM-1012 is sent via UDP protocol.

### 5.1 Communication Control

For details on the communication control flow, see Chapter 4.1.

#### 5.1.1 Communication Start

The host registers groups to the multicast address.

**Table 5-1 Communication Control Parameters**

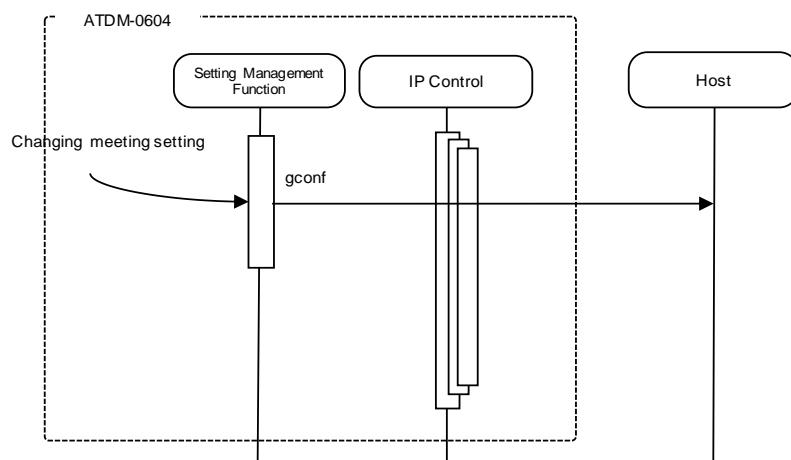

No	Name	Default Setting	Remarks
1.	IPAddress	225.000.000.100	Multicast address
2.	Port No	17000	

#### 5.1.2 Control Sequence

##### 5.1.2.1 Information

If the ATDM-1012 status changes, a status change notification is sent.

<Example> The sequence of conference status notification is shown below.

**Figure 5-1 Information Command Processing Sequence**

#### 5.1.3 Communication Errors

For details on the sequence for transmission errors, see 4.1.3.1.

#### 5.1.4 Communication End

The host can unregister groups at any timing.

## 5.2 Command Details

### 5.2.1 Level Meter Notification

Level Meter Notification is sent by ATDM-1012 regularly.

It is reported at the interval set in the Level Meter Notification Interval Change Request. (The default is 100 msec.)

It is not sent when IP Control Setting-Audio Level Notification is 0 (not used) in the network setting.

```
MD_level_meter_notice_0000_00_NC_61,61,61,61,61,61,61,61,61,61,61,61,61,61,61,61,  
61,61,61,61,61,61,61,61,61,61,60,60,60,60,60,60,60,60,60,60,60,15,15,15,15,15,15,15,  
15_<
```

**Table 5-2 Command Format**

No	item	Description	type	value	value description	remarks
1	Modify	MD	string	MD

7	End Character		Termination character of a message	binary	0x0d	CR	

## 5.2.2 Input Gain/Level Setting Notification

Input Gain/Level Setting Notification is sent when the ATDM-1012 changes the gain/level settings of the input channel.  
It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_input\_gain\_level\_notice\_0000\_00\_NC\_11,40,40,511,1\_<

Table 5-3 Command Format

No	item	Description	type	value	value description	remarks
1	Modify	MD	string	MD

### 5.2.3 Output Level Setting Notification

Output Level Setting Notification is sent when the ATDM-1012 changes the level settings of the output channel.

It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_output\_level\_notice\_0000\_00\_NC\_9,511\_↓

	End Character	Termination character of a message	binary	0x0d	CR	

## 5.2.4 Output Channel Mute Setting Notification

Output Channel Mute Setting Notification is sent when the ATDM-1012 changes the mute settings of the output channel.  
It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_output\_mute\_notice\_0000\_00\_NC\_9,1 ↴

## 5.2.5 Operator Page Channel Setting Notification

Operator Page Channel Setting Notification is sent when the ATDM-1012 changes the level settings of the page for an operator.

It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD(operator\_channel\_notice\_0000\_00\_NC\_8,100,1,8\_)

**Table 5-6 Command Format**

	Page	Page number		1	Mute	
7	End Character	Termination character of a message	binary	0x0d	CR	

### 5.2.6 Array Mic Mute Status Notification

Array Mic Mute Status Notification is sent when the ATDM-1012 changes the Mute state of Array Mic.

It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_arraymic\_mute\_notice\_0000\_00\_NC\_1,1\_↓

7	End Character	Termination character of a message	binary	0x0d	CR	

### 5.2.7 Recording Status Notification

Recording Status Notification is sent when the ATDM-1012 changes the recording state.

It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_rec\_status\_notice\_0000\_00\_NC\_1\_↓

**Table 5-8 Command Format**

7	End Character	Termination character of a message	binary	0x0d	CR	

### 5.2.8 Preset Call Notification

Preset Call Notification is sent when the ATDM-1012 calls preset.

It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_recall\_preset\_notice\_0000\_00\_NC\_1\_↓

**Table 5-9 Command Format**

No	item	Description	type	value	value description	remarks

	Partial Preset Number	Partial preset number	string	1 - 40	Partial preset number	
7	End Character	Termination character of a message	binary	0x0d	CR	

### 5.2.10 Open Channel State Notification

When Smart Mix is set to Enable and the Active information is changed from the ATDM-1012, an Open Channel State Notification will be sent.

It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_open\_channel\_notice\_0000\_00\_NC\_9,4,1\_↓

**Table 5-11 Command Format**

No	item	Description	type	Value	value description	remarks
1	Modify	MD	string	MD

	Status	Open state	string	0	Close	
				1	Open	
7	End Character	Termination character of a message	binary	0x0d	CR	

### 5.2.11 Can Cut Setting Notification

When Smart Mix is set to Gate and the Priority and Can Cut information is changed from the ATDM-1012, a Can Cut Status Notification will be sent. It is not sent when IP Control Setting Notification is 0 (not used) in the network setting.

MD\_cancut\_notice\_0000\_00\_NC\_0,0,0,0,0,0,0,0,0,0 ↴

**Table 5-111 Command Format**
